## Safety Light Curtain/Multi-beam Safety Sensor

## F3SN-A/F3SN-B/F3SH-A

Safety Light Curtain/Multi-beam Safety Sensor F3SN-A/F3SN-B/F3SH-A

## Available Models

## Main unit

F3SN-A Safety Light Curtain (Type 4)

| Detection capability | Beam gap | Appearance | Operating range | Number of beams | Protective height | Connector for series-connection | Model (see note 1) |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 14 mm-dia. (for finger protection) | 9 mm |  | 0.2 to 7 m | 21 to 125 (odd numbers only) | 189 to 1125 mm (every 18 mm ) | No | F3SN-A $\square \square \square \square$ P14 |
|  |  |  |  |  |  | Yes | F3SN-A $\square \square \square \square$ P14-01 (see note 2) |
| 25 mm -dia. (for hand protection) | 15 mm |  | $]_{10 \mathrm{~m}}^{0.2 \text { to }}$ | 13 to 120 | 217 to 1822 mm (every 15 mm ) | No | F3SN-A $\square \square \square \square \mathrm{P} 25$ |
|  |  |  |  |  |  | Yes | F3SN-A $\square \square \square \square$ P25-01 (see note 2) |
| 40 mm-dia. (for presence protection) | 30 mm |  |  | 7 to 60 | 217 to 1807 mm | No | F3SN-A $\square \square \square \square$ P40 |
|  |  |  |  |  |  | Yes | F3SN-A $\square \square \square \square$ P40-01 (see note 2) |
| 70 mm-dia. (for presence detection) | 60 mm |  |  |  |  | No | F3SN-A $\square \square \square \square$ P70 |
|  |  |  |  | 5 to 30 | 277 to 1777 mm | Yes | F3SN-A $\square \square \square \square$ P70-01 (see note 2) |

Note: 1. The $\square \square \square \square$ in the model numbers indicates the protective height (in mm). Refer to Safety Light Curtain on page 7 for model number details.
2. Safety Light Curtains of model numbers ending in -02 through - -05 , provided with different connector configurations, are also available as options. Consult with your dealer or OMRON representative when ordering this model.

## F3SN-B Safety Light Curtain (Type 2)

| Detection <br> capability | Beam <br> gap | Appearance | Operating range |  | Number of <br> beams | Protective <br> height | Output <br> (see note 1) | Model (see note 2, 3) |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 25 mm -dia. <br> (for hand <br> protection) | 15 mm |  |  |  |  |  |  |  |

Note: 1. For details of the method for securing safety by using an NPN transistor for output, contact OMRON's sales representatives.
2. The $\square \square \square \square$ in the model numbers indicates the protective height (in mm ). Refer to Safety Light Curtain on page 7 for model number details.
3. Safety Light Curtains of model numbers ending in -02 through -05 , provided with different connector configurations, are also available as options. Consult with your dealer or OMRON representative when ordering this model.

## F3SH-A Multi-beam Safety Sensor (Type 4)

$\square$ Infrared

| Beam gap | Appearance | Operating range <br> Number of <br> beams |  | Outermost <br> beam gap | Connector for <br> series-connection | Model |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  |  |  |  |  |  |

Note: Safety Light Curtains of model numbers ending in -02 through -05, provided with different connector configurations, are also available as options.
Consult with your dealer or OMRON representative when ordering this model.

## ■ Accessories (Optional)

## Control Unit

| Appearance | Output | Model | Remarks |
| :---: | :---: | :---: | :---: |
| Relay, 3NO + 1NC | F3SP-B1P | For connection with the F3SN-A, F3SN-B, <br> and F3SH-A, use F39-JCDB cables fitted <br> with connectors at both ends. |  |

## Safety Relay Unit

| Appearance | Output | Model | Remarks |
| :---: | :--- | :--- | :--- |
| Relay, 3NO |  |  |  |

## Muting Controller

| Appearance | Model | Remarks |
| :---: | :---: | :---: |
|  | F3SP-U2P | For connection with the F3SN-A, F3SN-B, and F3SH-A, use F39-JC $\square$ A cables fitted with connectors at single end. |

## Setting Console

| Appearance | Model | Accessories |
| :---: | :---: | :---: |
|  | F39-MC11 | One branching connector, one connector cap, <br> 2-m cable, instruction manual |

## Branching Connector

| Appearance | Model | Remarks |
| :--- | :--- | :--- |
|  | F39-CN1 | Purchase this connector when needed additionally for installing the <br> F39-MC11. |

## Single-ended Connector Cable (For Emitter and Receiver Set)

| Appearance | Cable length | Specification | Model |
| :---: | :---: | :---: | :---: |
|  | 3 m | M 12 connector (8 pin) | F39-JC3A |
|  | 7 m |  | F39-JC7A |
|  | 10 m |  | F39-JC10A |
|  | 15 m |  | F39-JC15A |

Double-ended Connector Cable (For Emitter and Receiver Set)

| Appearance | Cable length | Specification | Model | Application |
| :---: | :---: | :---: | :---: | :---: |
|  | 0.2 m | M12 connector (8 pins) | F39-JCR2B | Series connection or connection with F3SP-B1P |
|  | 0.5 m |  | F39-JCR5B |  |
|  | 3 m |  | F39-JC3B |  |
|  | 5 m |  | F39-JC5B | Connection with F3SP-B1P (see note 1) |
|  | 7 m |  | F39-JC7B |  |
| + | 10 m |  | F39-JC10B |  |
| )) | 15 m |  | F39-JC15B |  |
| 0 | 20 m |  | F39-JC20B |  |
| , | 0.2 m | M12 connector (8 pins) | F39-JCR2C | Connection with G9SA-300-SC (see notes 1 and 2) |
| - | 1 m |  | F39-JC1C |  |
|  | 3 m |  | F39-JC3C |  |
|  | 7 m |  | F39-JC7C |  |
|  | 10 m |  | F39-JC10C |  |
|  | 15 m |  | F39-JC15C |  |

Note: 1. Cannot be used for series-connection purpose.
2. When two or more cables have to be used for connection with the G9SA-300-SC, connect the necessary number of F39-JC $\square \mathrm{B}$ cables to one F39-JC $\square \mathrm{C}$ cable.
(Example) When a 35 m long cable is required, connect two F39-JC $\square \mathrm{B}$ cables to one F39-JC $\square \mathrm{C}$.
External Indicators (Separate Models for Emitters and Receivers)

| Appearance | Specification | Indicator | Type | Model |
| :---: | :---: | :---: | :---: | :---: |
|  | M12 connector for PNP output | Red | Emitter | F39-A01PR-L |
|  |  |  | Receiver | F39-A01PR-D |
|  |  | Green | Emitter | F39-A01PG-L |
|  |  |  | Receiver | F39-A01PG-D |

Note: These indicators are used for connecting with series-connection type emitters/receivers (models ending in -01). The desired turn-ON timing (type of signal) can be selected on setting console. (Only Light-On Mode is available with F3SN-B)
Mirror (Reduces Operating Range by $12 \%$ with Each Unit)

| Mirror material | Width (mm) | Depth (mm) | Length (mm) | Model |
| :---: | :---: | :---: | :---: | :---: |
| Glass mirror | 145 | 32 | 406 | F39-MLG0406 |
|  |  |  | 610 | F39-MLG0610 |
|  |  |  | 711 | F39-MLG0711 |
|  |  |  | 914 | F39-MLG0914 |
|  |  |  | 1067 | F39-MLG1067 |
|  |  |  | 1219 | F39-MLG1219 |
|  |  |  | 1422 | F39-MLG1422 |
|  |  |  | 1626 | F39-MLG1626 |
|  |  |  | 1830 | F39-MLG1830 |
|  |  |  | 2134 | F39-MLG2134 |

Spatter Protection Cover (Includes Two Pieces for Emitter and Receiver) (Reduces Operating Range by 10\% with Each Unit)

| Appearance | Applicable sensor | Model |
| :---: | :---: | :---: |
|  | F3SN-A $\square \square \square \square$ P14(-01) | F39-HN $\square \square \square \square$-14 |
|  |  | F39-HN $\square \square \square \square-25$ |
|  | F3SH-A09P03(-01) | F39-HH09-03 |

Note: The same 4-digit numbers as the protective heights ( $\square \square \square \square$ in the light curtain type names) are substituted by $\square \square \square \square$ in the model names.
Spatter Protection Slit Cover (Includes Two Pieces for Emitter and Receiver; see note)

| Appearance | Applicable sensor | Model |  |
| :---: | :---: | :---: | :---: |
|  |  | Slit width: 1.15 mm | Slit width: 0.6 mm |
|  | F3SN-A $\square \square \square \square \mathrm{P} 14(-01)$ | F39-HS $\square \square \square \square$ A-14 | F39-HS $\square \square \square \square$ B-14 |
|  | F3SN-A $\square \square \square \square \mathrm{P} 25(-01)$ F3SN-A $\square \square \square \square \mathrm{P} 40(-01)$ F3SN-A $\square \square \square \square \mathrm{P} 70(-01)$ F3SN-B $\square \square \square \square \mathrm{P} 25(-01)$ F3SN-B $\square \square \square \mathrm{P} 40(-01)$ F3SN-B $\square \square \square \square \mathrm{P} 70(-01)$ | F39-HS $\square \square \square \square \mathbf{A - 2 5}$ | F39-HS $\square \square \square \square \mathrm{B}-25$ |
|  | F3SH-A09P03(-01) | F39-HSH09A-03 | F39-HSH09B-03 |

Note: Operating range will decrease substantially. Refer to Ratings and Performance on page 9 for details.

## Environment-resistant Enclosure (A Package of a Pipe, Gasket, and Bracket; see note)

Note: Purchase 2 sets when using both an emitter and a receiver.

## Multi-beam Sensor Support Stand/Mirror Stand

| Appearance | Specification | Model | Remarks |
| :--- | :--- | :--- | :--- |
|  | $\begin{array}{l}\text { Stand unit } \\ \text { Materials } \\ \text { Base: STKM (base) } \\ \text { SUS304 (leaf spring) } \\ \text { Pipe, bolts and nuts: SUS304 } \\ \text { Weight: } 11.8 \mathrm{~kg}\end{array}$ | F39-ST1 |  |\(\left.\quad \begin{array}{l}Minimum order quantity: 1 pc. <br>

(In total, 2 stands are required for each F3SH-A: <br>
one for the emitter and the other for the receiver.)\end{array}\right\}\)

Mounting Bracket for Sensor (Optional)

| Appearance | Specification | Model | Remarks |
| :---: | :---: | :---: | :---: |
|  | Wall mounting bracket Material: Iron (zinc plating) (see note) | F39-L18 | For emitter: 2 pcs. For receiver: 2 pcs. Total: 4pcs./set |
|  | Free-location bracket Materials: Zinc die-cast (zinc plating) <br> Note: Not provided with an angle deflection mechanism for beam control. | F39-L19 | Minimum order quantity: 1 pc . |
|  | Free-location bracket Materials Sensor fixing element: Zinc die-cast (zinc plating) Mounting bracket: Iron (zinc plating) <br> Note: Provided with an angle deflection mechanism for beam control | F39-L20 | Minimum order quantity: 1 pc . |

Note: Use these brackets for sensors having an operating range where no intermediate bracket is required (with an operating range of less than 640 mm )

## Test Rod (Optional)

| Appearance | Applicable sensor | Specification | Model |
| :---: | :---: | :---: | :---: |
|  | F3SN-A $\square \square \square \square \mathrm{P} 14(-01)$ | 14 mm-dia. (provided with the sensor) | F39-TR14 |
|  |  | Used for checking the setting condition of single-beam floating blanking | F39-TR23 |
|  |  | Used for checking the setting condition of two-beam floating blanking | F39-TR32 |
|  | F3SN-A $\square \square \square \square \mathrm{P} 25(-01)$ | 25 mm -dia. (provided with the sensor) | F39-TR25 (see note 1) |
|  |  | Used for checking the setting condition of single-beam floating blanking | F39-TR40 (see note 2) |

Note: 1. Also provided with the F3SN-B $\square \square \square \square \mathrm{P} 25$.
2. Also provided with the F3SN-A $\square \square \square \mathrm{P} 40$ and F3SN-B $\square \square \square \mathrm{P} 40$.

## Safety Light Curtain

$\square$ : F3SN-B $\square \square \square \square \square \square$ safety light curtains are also available.
F3SN-A $\square \square \square \square \mathbf{P 1 4 ( - 0 1 ) ~}$

| Model | Protective <br> height | Number <br> of beams |
| :--- | :--- | :--- |
| F3SN-A0189P14(-01) | 189 | 21 |
| F3SN-A0207P14(-01) | 207 | 23 |
| F3SN-A0225P14(-01) | 225 | 25 |
| F3SN-A0243P14(-01) | 243 | 27 |
| F3SN-A0261P14(-01) | 261 | 29 |
| F3SN-A0279P14(-01) | 279 | 31 |
| F3SN-A0297P14(-01) | 297 | 33 |
| F3SN-A0315P14(-01) | 315 | 35 |
| F3SN-A0333P14(-01) | 333 | 37 |
| F3SN-A0351P14(-01) | 351 | 39 |
| F3SN-A0369P14(-01) | 369 | 41 |
| F3SN-A0387P14(-01) | 387 | 43 |
| F3SN-A0405P14(-01) | 405 | 45 |
| F3SN-A0423P14(-01) | 423 | 47 |
| F3SN-A0441P14(-01) | 441 | 49 |
| F3SN-A0459P14(-01) | 459 | 51 |
| F3SN-A0477P14(-01) | 477 | 53 |
| F3SN-A0495P14(-01) | 495 | 55 |

| Model | Protective <br> height | Number <br> of beams |
| :--- | :--- | :--- |
| F3SN-A0513P14(-01) | 513 | 57 |
| F3SN-A0531P14(-01) | 531 | 59 |
| F3SN-A0549P14(-01) | 549 | 61 |
| F3SN-A0567P14(-01) | 567 | 63 |

## Main Unit

## F3SN-A/F3SH-A

| Model | Standalone | F3SN-A $\square \square \square$ P14 (see note 1) | F3SN-A $\square \square \square P 25$ (see note 1) | F3SN-A $\square \square \square \square$ P40 (see note 1) | F3SN-A $\square \square \square$ P70 (see note 1) | F3SH-A09P03 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Item | Series connection | F3SN-A $\square \square \square \square$ P14-01 (see notes 1 and 2) | F3SN-A $\square \square \square \square$ P25-01 (see note 1) | F3SN-A $\square \square \square$ P40-01 (see note 1) | F3SN-A $\square \square \square \square$ P70-01 (see note 1) | F3SH-A09P03-01 |
| Sensor type |  | Type 4 Safety Light Curtain |  |  |  |  |
| Applicable safety category |  | 4, 3, 2, 1, B |  |  |  |  |
| Operating range |  | 0.2 to 7 m | 0.2 to 10 m |  |  |  |
| Beam gap (P) |  | 9 mm | 15 mm | 30 mm | 60 mm | 300 mm |
| Number of beams ( n ) |  | $\begin{array}{\|l\|} \hline 21 \text { to } 125 \\ \text { (odd numbers only) } \\ \hline \end{array}$ | 13 to 120 | 7 to 60 | 5 to 30 | 4 |
| Protective height (PH) |  | $\begin{aligned} & 189 \text { to } 1125 \mathrm{~mm} \\ & \mathrm{PH}=\mathrm{n} \times \mathrm{P} \end{aligned}$ | $\begin{aligned} & 217 \text { to } 1822 \mathrm{~mm} \\ & \mathrm{PH}=(\mathrm{n}-1) \times \mathrm{P}+37 \end{aligned}$ | $\begin{aligned} & 217 \text { to } 1807 \mathrm{~mm} \\ & \mathrm{PH}=(\mathrm{n}-1) \times \mathrm{P}+37 \\ & \hline \end{aligned}$ | $\begin{aligned} & 277 \text { to } 1777 \mathrm{~mm} \\ & \mathrm{PH}=(\mathrm{n}-1) \times \mathrm{P}+37 \end{aligned}$ | - |
| Outermost beam gap |  | PH $=(n-1) \times P+37$ PH $(n-1) \times P+37 \times H=(n-1) \times P+37$ |  |  |  | 900 mm |
| Detection capability |  | Non-transparent: 14 mm in diameter | Non-transparent: 25 mm in diameter | Non-transparent: 40 mm in diameter | Non-transparent: 70 mm in diameter | - |
| Effective aperture angle (EAA) |  | Within $\pm 2.5^{\circ}$ for the emitter and receiver at a detection distance of at least 3 m according to IEC 61496-2 |  |  |  |  |
| Light source (luminous wavelength) |  | Infrared LED (870 nm) |  |  |  |  |
| Supply voltage (Vs) |  | 24 VDC $\pm 10 \%$ (ripple p-p 10\% max.) |  |  |  |  |
| Current consumption (under no-load conditions) | Emitter | Up to 50 beams: 140 mA max., 51 to 85 beams: $155 \mathrm{~mA} \mathrm{max.}$,86 beams and more: 170 mA max . |  |  |  | 140 mA max. |
|  | Receiver | Up to 50 beams: 100 mA max., 51 to 85 beams: 110 mA max., 86 beams and more: 120 mA max . |  |  |  | 100 mA max. |
| OSSD |  | Two PNP transistor outputs, load current 300 mA max., residual voltage 2 V max. (except for voltage drop due to cable extension) |  |  |  |  |
| Auxiliary output (non-safety output) |  | One PNP transistor output, load current 50 mA max., residual voltage 2 V max. (except for voltage drop due to cable extension) |  |  |  |  |
| External indicator output (non-safety output) (see note 3) |  | One PNP transistor output, load current 40 mA max., residual voltage 2 V max. (except for voltage drop due to cable extension) |  |  |  |  |
| Output operation mode |  | OSSD output: Light-ON <br> Auxiliary output: Dark-ON (can be changed by the F39-MC11) <br> External indicator output: Light-ON (can be changed by the F39-MC11) (see note 3) |  |  |  |  |
| Input voltage |  | For test input, interlock selection input, reset input, and external relay monitor input voltages; ON voltage: 9 to 24 V (with a sink current of 3 mA max.), OFF voltage: 0 to 1.5 V or open |  |  |  |  |
| Test functions |  | - Self-test (after power ON, and during operation, one cycle during response time) <br> - External test (light emission stop function by test input) |  |  |  |  |
| Mutual interference prevention function (see note 3) |  | Time-shared beam projection system by series connection <br> - Number of series connected light curtains: Up to 3 sets <br> - Number of beams: Up to 240 beams <br> - Length of the series connection cable: 3 m max. |  |  |  |  |
| Safety-related functions |  | - Auto reset/manual reset (interlock) (see note 4) <br> - EDM (External Device Monitoring) <br> - Fixed blanking (see note 5) <br> - Floating blanking (see note 5) |  |  |  | - Auto reset mode/manual reset mode (interlock) (see note 4) <br> - EDM (External Device Monitoring) |
| Protection |  | Output short-circuit protection, reverse polarity protection |  |  |  |  |
| Response time (under stable light incident condition) |  | ON to OFF: 10 to 15.5 ms max. OFF to ON: 40 to 62 ms max. Refer to page 28 for details. |  |  |  | ON to OFF: 10 ms max. OFF to ON: 40 ms max. |
| Startup waiting time |  | 1 s max. |  |  |  |  |
| Ambient light intensity |  | Incandescent lamp: 3000 Ix max. (light intensity on the receiver surface) Sunlight: 10000 Ix max. (light intensity on the receiver surface) |  |  |  |  |
| Ambient temperature |  | Operating: -10 to $+55^{\circ} \mathrm{C}$, storage: -30 to $+70^{\circ} \mathrm{C}$ (with no icing or condensation) |  |  |  |  |
| Ambient humidity |  | Operating/storage: 35 to 95\% RH (with no condensation) |  |  |  |  |
| Insulation resistance |  | $20 \mathrm{M} \Omega$ min. (at 500 VDC$)$ |  |  |  |  |
| Dielectric strength voltage |  | 1000 VAC 50/60 Hz 1 min. |  |  |  |  |
| Vibration resistance (malfunction) |  | 10 to 55 Hz , double amplitude: $0.7 \mathrm{~mm}, \mathrm{X}, \mathrm{Y}$ and Z directions: 20 sweeps |  |  |  |  |
| Shock resistance (malfunction) |  | $100 \mathrm{~m} / \mathrm{s}^{2}, \mathrm{X}, \mathrm{Y}$ and Z directions: 1000 times |  |  |  |  |
| Degree of protection |  | IP65 (IEC60529) |  |  |  |  |
| Connection method |  | M12 connector (8 pins) |  |  |  |  |
| Weight (in packaging) |  | Calculate with the following equation: <br> Weight of light curtain with protective height of 189 mm to $738 \mathrm{~mm}:(\mathrm{g})=($ Protective height +100$) \times 2+1300$ <br> Weight of light curtain with protective height of 747 mm to $1402 \mathrm{~mm}:(\mathrm{g})=($ Protective height +100$) \times 2+1700$ <br> Weight of light curtain with protective height of 1417 mm to $1822 \mathrm{~mm}:(\mathrm{g})=($ Protective height +100$) \times 2+2100$ |  |  |  |  |
| Materials |  | Case: Aluminum, cap: Zinc die-cast, optical cover: PMMA (acrylic resin) |  |  |  |  |
| Accessories |  | Test rod (see note 6), instruction manual, error mode label, mounting brackets (top and bottom), mounting brackets (intermediate) (see note 7) |  |  |  |  |
| Applicable standard |  | IEC61496-1, EN61496-1 Type 4 ESPE (Electro-Sensitive Protective Equipment) IEC61496-2 Type 4 AOPD (Active Opto-electronic Protective Devices) |  |  |  |  |

Note: 1. The 4 digits in $\square \square \square \square$ in the model number represent the protective height. Use the formula given in the information on protective height specifications to calculate the height.
For example, if the beam gap is 9 mm , and the No . of beams is 21 , the protective height will be $9 \times 21=189 \mathrm{~mm}$. The model with this protective height is F3SN-A0189P14.
2. F3SN-A $\square \square \square \square \mathrm{P} 14-01$ is a customized model. Consult with your dealer or OMRON representative when ordering this model.
3. Models ending in -01 only.
4. For the factory setting, the manual reset mode is set to the "start/restart" interlock.

Using the F39-MC11 can select either the start interlock or the restart interlock.
5. For the factory setting, the function is not set. It can be enabled with the F39-MC11.
6. Not provided with the F3SN-A $\square \square \square \square$ P70 and F3SH-A.
7. The intermediate mounting bracket is supplied with the following types:

Types which have the total length of the light curtain from 640 mm to 1280 mm : 1 set for each of emitter and receiver.
Types which have the total length of the light curtain over 1280 mm : 2 sets for each of emitter and receiver.

| F3SN-B $\square$ Different from specifications of F3SN-A) |  |  |  |  |

| Sensor type |  | Type 2 Safety Light Curtain |  |  |
| Applicable safety category |  | 2, 1, B |  |  |
| Operating range |  | 0.2 to 10.0 m |  |  |
| Beam gap (P) |  | 15 mm | 30 mm | 60 mm |
| Number of beams ( n ) |  | 13 to 119 (noncontinuous) | 7 to 60 (noncontinuous) | 5 to 30 |
| Protective height (PH)$(P H=(n-1) \times P+37)$ |  | 217 to 1807 mm | 217 to 1807 mm | 277 to 1777 mm |
| Detection capability |  | Non-transparent: 25 mm in diameter | Non-transparent: 40 mm in diameter | Non-transparent: 70 mm in diameter |
| Effective aperture angle (EAA) (beam spread angle) |  | Within $\pm 5^{\circ}$ for the emitter and receiver at a detection distance of at least 3 m according to IEC 61496-2 |  |  |
| Light source (luminous wavelength) |  | Infrared LED (870 nm) |  |  |
| Supply voltage (Vs) |  | 24 VDC $\pm 10 \%$ (ripple p-p 10\% max.) |  |  |
| Current consumption (under no-load conditions) | Emitter | Up to 50 beams: $140 \mathrm{~mA} \mathrm{max.}$,51 to 85 beams: 155 mA max., 86 beams and more: 170 mA max. |  |  |
|  | Receiver | Up to 50 beams: 100 mA max., 51 to 85 beams: $110 \mathrm{~mA} \mathrm{max.}$,86 beams and more: 120 mA max. |  |  |
| OSSD (see note 1) |  | Two PNP transistor outputs, load current 300 mA max., residual voltage 2 V max. (except for voltage drop due to cable extension) |  |  |
| Auxiliary output (non-safety output) |  | One PNP transistor output, load current 50 mA max., residual voltage 2 V max. (except for voltage drop due to cable extension) |  |  |
| Output operation mode (see note 1) |  | OSSD output: Light-ON, Auxiliary output: Dark-ON |  |  |
| Input voltage |  | For test input, interlock selection input, reset input, and external relay monitor input voltages; ON voltage: 9 to 24 V (with a sink current of 3 mA max.), OFF voltage: 0 to 1.5 V or open |  |  |
| Test functions |  | - Self-test (when power is ON and period is 1 s or less) <br> - External test (light emission stop function by test input) |  |  |
| Safety-related functions(see notes 2 and 3) |  | - Auto reset/manual reset (start/restart interlock) <br> - EDM (External Device Monitoring) |  |  |
| Protection |  | Output short-circuit protection, reverse polarity protection |  |  |
| Response time (under stable light incident condition) |  | ON to OFF: 10 to 15 ms max. OFF to ON: 40 to 60 ms max. Refer to page 28 for details. |  |  |
| Startup waiting time |  | 1 s max. |  |  |
| Ambient light intensity |  | Incandescent lamp: 3000 Ix max. (light intensity on the receiver surface) Sunlight: 10000 Ix max. (light intensity on the receiver surface) |  |  |
| Ambient temperature |  | Operating: -10 to $+55^{\circ} \mathrm{C}$, storage: -30 to $+70^{\circ} \mathrm{C}$ (with no icing or condensation) |  |  |
| Ambient humidity |  | Operating/storage: 35 to $95 \%$ RH (with no condensation) |  |  |
| Insulation resistance |  | $20 \mathrm{M} \Omega \mathrm{min}$. (at 500 VDC ) |  |  |
| Dielectric strength voltage |  | 1000 VAC 50/60 Hz 1 min. |  |  |
| Vibration resistance (malfunction) |  | 10 to 55 Hz , double amplitude: $0.7 \mathrm{~mm}, \mathrm{X}, \mathrm{Y}$ and Z directions: 20 sweeps |  |  |
| Shock resistance (malfunction) |  | $100 \mathrm{~m} / \mathrm{s}^{2}, \mathrm{X}, \mathrm{Y}$ and Z directions: 1000 times |  |  |
| Degree of protection |  | IP65 (IEC60529) |  |  |
| Connection method |  | M12 connector (8 pins) |  |  |
| Weight (in packaging) |  | Calculate with the following equation: <br> Weight of light curtain with protective height of 180 mm to $738 \mathrm{~mm}:(\mathrm{g})=($ Protective height +100$) \times 2+1300$ <br> Weight of light curtain with protective height of 747 mm to $1402 \mathrm{~mm}:(\mathrm{g})=($ Protective height +100$) \times 2+1700$ <br> Weight of light curtain with protective height of 1417 mm to $1822 \mathrm{~mm}:(\mathrm{g})=($ Protective height +100$) \times 2+2100$ |  |  |
| Materials |  | Case: Aluminum, cap: Zinc die-cast, optical cover: PMMA (Acrylic resin) |  |  |
| Accessories |  | Test rod (see note 4), instruction manual, mounting brackets (top and bottom), mounting brackets (intermediate) (see note 5), error mode label |  |  |
| Use of setting console |  | Not permitted |  |  |
| Applicable standard |  | IEC61496-1, EN61496-1 Type 2 ESPE (Electro-Sensitive Protective Equipment) IEC61496-2 Type 2 AOPD (Active Opto-electronic Protective Devices) |  |  |

Note: 1. A safety circuit has been adopted. Please note that the control logic (ON/OFF) may differ from conventionally used logic.
2. The manual reset mode is set to the "start/restart" interlock. It is impossible to select interlock only or restart interlock only.
3. No floating blanking or fixed blanking function is provided.
4. Not provided with the F3SN-B $\square \square \square \square$ P70.
5. The intermediate mounting bracket is supplied with the following types:

Types which have the total length of the light curtain from 640 mm to 1280 mm : 1 set for each of emitter and receiver. Types which have the total length of the light curtain over 1280 mm : 2 sets for each of emitter and receiver.

## $\square$ Accessories

## Control Unit

| Item | Model | F3SP-B1P | G9SA-300-SC (See note) |
| :---: | :---: | :---: | :---: |
| Applicable sensor |  | F3SN-A, F3SN-B, F3SH-A |  |
| Supply voltage |  | 24 VDC $\pm 10 \%$ |  |
| Power consumption |  | 1.7 W DC max. (does not include the sensor's current consumption) | 24 VDC: 0.7 WDC max. (does not include the sensor's current consumption) |
| Operating time |  | 100 ms max. (does not include the sensor's response time) | 300 ms max. (does not include the sensor's response time and bouncetime) |
| Response time |  | 10 ms max. (does not include the sensor's response time) | 10 ms max. (does not include the sensor's response time and bouncetime) |
| Relay output | No. of contact | $3 \mathrm{NO}+1 \mathrm{NC}$ | 3 NO |
|  | Rated load | $25 \mathrm{VAC}, 5 \mathrm{~A}(\cos$ diameter $=1$ ), $30 \mathrm{VDC}, 5 \mathrm{AL} / \mathrm{R}=0 \mathrm{~ms}$ | 250 VAC, 5 A |
|  | Rated carry voltage | 5 A |  |
| Connection method | Between sensor's | M12 connector (8 pins) |  |
|  | Other | Terminal block |  |
| Weight (in packaging) |  | Approx. 280 g | Approx. 300 g |
| Accessory |  | Instruction manual |  |

Note: For further details on the G9SA-300-SC, refer to the G9SA catalogue (Cat. No: J123-E1-01).

## Muting Controller

| Item Model | F3SP-U2P |
| :---: | :---: |
| Safety category | Up to category 4. |
| Number of connectable light curtains | Up to 2 sets (see note 1) |
| Supply voltage | 24 VDC $\pm 10 \%$ (ripple p-p 10\% max.) |
| Power consumption | 8 W max. (does not include muting lamp and sensor) (see note 2) |
| Response time | $30 \mathrm{~ms} \mathrm{max}$. |
| Connectable light curtain | All curtains of the F3SN, F3SH, F3SL, and F3SS models made by OMRON |
| Output | 2 NO contacts, 250 VAC, 2.5 A max. |
| Input | Test input: NC contact, reset input: NO contact, Muting sensor input: PNP transistor type or NO contact type; 4 sets max. |
| Indicators | Output indicator lamp (red/green LED): Red LED will illuminate when output is OFF, while green LED will illuminate when output is ON. Input indicator lamp (4 green LEDs): Green LED will illuminate when 24 V is applied. Status display ( 1 digit with 7 segments): Status of the F3SP is displayed. |
| Test functions | Self-test (after power ON, and during operation), external test (by test input) |
| Safety-related functions | Auto reset/manual reset (interlock), muting function, override function |
| Applicable muting lamp | Incandescent lamp, 24 VDC, 3 to 7 W (see notes 1 and 2) |
| Ambient temperature | Operating: -10 to $+50^{\circ} \mathrm{C}$, storage: -30 to $+70^{\circ} \mathrm{C}$ (with no icing or condensation) |
| Ambient humidity | 15 to 95\% RH (with no condensation) |
| Degree of protection | IP20 (IEC60529) |
| Vibration resistance (malfunction) | 10 to 55 Hz , double amplitude: $0.7 \mathrm{~mm}, \mathrm{X}, \mathrm{Y}$ and Z directions: 20 sweeps |
| Shock resistance (malfunction) | $100 \mathrm{~m} / \mathrm{s}^{2}, \mathrm{X}, \mathrm{Y}$ and Z directions: 1000 times |
| Weight (in packaging) | Approx. 870 g |
| Accessory | Instruction manual |

Note: 1. The total power consumption should not exceed 24 W , the rating of the fuse (self-reset type) used in the F3SP.

- Light Curtain
- Muting lamp: 3 to 7 W
- Single unit of F3SP (excluding load current): The number of controllers multiplied by 8 W should not exceed 24 W .

2. Use of muting lamp is required even when no muting function is used. The following lamps are recommended (both lamps have the same power consumption: 5 W )

- Model PS-24-Y B0568 lamp made by PATLITE Corp. (For replacing the lamp, be sure to use an incandescent lamp. LED lamp will disable the current-detection type failure monitoring system.)
- Model ASSC-24 lamp made by Asahi Electric Co., Ltd.

## Setting Console

| Item $\quad$ Model | F39-MC11 |
| :--- | :--- |
| Applicable sensor | F3SN-A, F3SH-A |
| Supply voltage | $24 \mathrm{VDC} \pm 10 \%$ (provided from the sensor) |
| Connection method | Cable (included) |
| Weight (in packaging) | 360 g |
| Accessories | One branching connector, 2-m cable, <br> one connector cap, instruction manual |

For details on the setting console, refer to the instruction manual provided with the product.

## External Indicator

| Model | F39-A01PR-L <br> (Emitter) <br> F39-A01PR-D <br> (Receiver) | F39-A01PG-L <br> (Emitter) <br> F39-A01PG-D <br> (Receiver) |
| :--- | :--- | :--- |
| Applicable sensor | F3SN-A $\square \square \square \square$ P $\square \square-01$, <br> F3SN-B $\square \square \square \square P \square \square-01, ~ F 3 S H-A 09 P 03-01 ~$ |  |
| Light source | Red LED | Green LED |
| Supply voltage | 24 VDC $\pm 10 \%$ (provided from the sensor) |  |
| Current <br> consumption | 50 mA max. (provided from the sensor) |  |
| Connection method | M12 connector (8 pins) |  |
| Weight (in packaging) | Approx. 80 g |  |

## Spatter Protection Slit Cover

| Item Model |  | F39-HS $\square \square \square \square$ A-14 | F39-HS $\square \square \square \square \mathrm{B}$-14 | F39-HS $\square \square \square \square$ A-25 F39-HSH09A-03 | F39-HS $\square \square \square \square-25$ F39-HSH09B-03 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Applicable sensor |  | F3SN-A $\square \square \square \square \mathrm{P} 14(-01)$ |  | F3SN-A $\square \square \square \square \mathrm{P} \square \square(-01)$,F3SN-B $\square \square \square \square \mathrm{P} \square \square(-01)$, F3SH-A09P03(-01) |  |
| Operating range (typical value) (see note) | When one cover is used | 3 m | 2 m | 5.5 m | 3.5 m |
|  | When two covers are used | 1 m | 0.5 m | 2 m | 1 m |
| Distance that does not cause mutual interference (typical value) | When one cover is used | 6.5 m | 4.8 m | 12.2 m | 7.8 m |
|  | When two covers are used | 2.4 m | 1.2 m | 4.4 m | 2.1 m |

Note: The maximum distance that can turn ON all of the five light intensity level indicators.

## Environment-resistant Enclosure

| Item | Model | F39-HP $\square \square \square \square-14$ |
| :--- | :--- | :--- |
| Applicable sensor | F3SN-A $\square \square \square \square \mathrm{P} 14(-01)$ | F39-HP $\square \square \square \square-25$ <br> F39-HPH09-03 |
| Operating range characteristics | 0.2 to 6 m | F3SN-A $\square \square \square \square P \square \square(-01)$, <br> F3SN-B $\square \square \square \square P \square \square(-01), ~ F 3 S H-A 09 P 03(-01) ~$ |
| Degree of protection (see note) | IP67 (IEC60529) | 0.2 to 10 m |
| Materials | Case: Acrylic resin, rubber: NBR60, mounting bracket: SUS316L, screw: SUS316L |  |

Note: To conform to IP67, tighten the screws according to the "Cautions for Use" as described in the manual packaged together with the product.

## Safety-related Functions

## Interlock Function

The auto reset mode and the manual reset mode are wire selectable features of the F3SN-A/F3SN-B/F3SH-A.

## Auto reset mode

After the power is turned ON and none of the beams are interrupted, the OSSD (Output Signal Switching Device) outputs will go to their ON-state.

## Manual reset mode

For the factory setting, the start/restart interlock is selected in the manual reset mode. When the light curtain enters the interlock condition, it keeps the OSSD outputs in the OFF-state. Even if all beams become free, the OSSD outputs will not go to the ON-state. When none of the beams are interrupted in the detection zone, applying the reset input resets the interlock condition and the OSSD outputs go to the ON-state.

- Start/restart interlock

After the power is turned ON, or when at least one beam is interrupted, the light curtain enters the interlock condition.

- Start interlock

Only after power ON, the light curtain enters the interlock condition.

- Restart interlock

Only when at least one beam is interrupted, the light curtain enters the interlock condition.

## Fixed Blanking Function (F3SN-A only)

This function is set with the F39-MC11 setting console.
This is a function provided to disable a specific area of the light curtain's detection zone. Fixed blanking can be set for any desired number of beams. If an object enters the disabled detection zone, the OSSD outputs status will not change. This function is used when there is a stationary object in the detection zone that needs to be ignored.

## Floating Blanking Function (F3SN-A only)

This function is set with the F39-MC11 setting console.
During normal operation when floating blanking is disabled, and at least one beam is interrupted, the light curtain will go to the OFFstate. However, using this function prevents the light curtain from going to the OFF-state until multiple beams (see notes 1, 2 and 3) are interrupted.
Note: 1. The number of the floating blanking beams can be selected in the range of 1 to 3 beams.
2. This function can be set to be active only if the interrupted beams are adjacent to each other.
3. This function can be set so that the top and bottom beams cannot be set for the function.

## Diagnostic Functions

## Self-test

After power ON, the F3SN-A/F3SN-B/F3SH-A performs a complete self-test within 1 second. In addition, it performs a self-test (within response time) periodically during operation.

## External Test

This function stops the emission of light from the light curtain using an external signal and checks that the light curtain operates properly.

## Lockout Condition

If an error is detected by the self-test, the light curtain enters the lockout condition, keeps the OSSD outputs in their OFF state and displays the error mode. Lockout condition can be cleared either by resetting the power or by changing the setting of the reset switch from closed to open (open to closed for auto-reset). (With some errors, the lockout condition is automatically reset when the light curtain confirms that the cause of the error has been removed.)

## EDM (External Device Monitoring)

This function monitors the state of the NC contacts. Connect the NC contact of the MPCEs to the EDM input line of the receiver. If the correct logical relationship between the OSSD outputs and the EDM input is not kept, the light curtain immediately enters the lockout condition and the OSSD outputs will go to their OFF-state.
The light curtain's normal operation is up to 300 ms max. (see note), this allows for the delay time caused by the release of the MPCEs.
To ensure the correct usage of this function, the MPCEs must be safety-approved types with forcibly-guided contacts.

## When the EDM is not used

In the case the EDM input is not used, connect the auxiliary output in the Dark-ON output mode to the EDM input line, or disable the EDM with the F39-MC11 setting console.
Note: The value can be changed by the F39-MC11.
(It is impossible to connect the F39-MC11 to the F3SN-B.)

## Non-safety Output

## Auxiliary Output

The default of this output is the reverse signal of the safety outputs (Dark-ON output). This output can be used for monitoring purposes by connecting it to a device such as a PLC.
The auxiliary output can be selected to give one of the following output operation modes by the F39-MC11. (No selection can be made by the F3SN-B.)

- Dark-ON output mode (fixed for the F3SN-B)
- Light-ON output mode
- Light diagnosis mode
- Lockout mode
- Outermost-beam monitoring mode
- Specified-beam mode
- Blanking monitoring mode (F3SN-A only)

## External Indicator Output (Series-Connection model only)

This output can be connected to an external indicator to display one of the operation modes as selected by the F39-MC11. The default of this output is Light-ON output. A desired output operation mode can be selected by using the F39-MC11. (Only default mode (Light-ON) is available with F3SN-B)

## Beam Center-line

The beam center-line is the line going through all of the beams. (See diagram below.) This position is a reference line for measuring safety distance. Use the line closer to the hazardous area as a reference line for the safety distance.

## Wiring Diagram

## Wiring for Sensor Only Configuration

## Wiring for the Manual reset mode and the EDM function

Note: 1. Use very low load type switches.
2. If $K 3$ is not necessary, short-circuit the auxiliary output with the EDM input.

When the EDM is Not Used
When the EDM is not necessary
(1) Use the F39-MC11 to disable the EDM.
or
(2) Disable the EDM by changing the wiring as shown in the figure below, when the auxiliary output is Dark ON.

## Series Connection (Up to 3 Sets)

Use of series connection type (model ending in -01, -03, -04, -05) enables series connection as shown in the figure at right. Both the stand-alone type and the series connection type can be used for the light curtains located at the top end.

Note: 1. In order to maintain performance characteristics, use the F39-JCR2B, F39-JCR5B or the F39-JC3B to connect light curtains in series connection.
The F39-JC7B, F39-JC10B, or F39-JC15B cannot be connected in series.
2. The F3SN and F3SH cannot be connected in series.
3. Model ending in -03 or -04 has a 0.2 m cable connector. Series connection without double-ended connector cables is possible.

## An Example of Safety Circuits Where No Controller is Used For category 4 rating (F3SN-A, F3SH-A)/category 2 rating (F3SN-B)

Applicable operation mode

- Manual reset mode
- Using the EDM function

S1: External test switch
S2: Interlock/lockout reset switch
KM1, KM2: Safety relay with forcibly-guided contacts (G7SA) or magnetic contactor
KM3: Solid-state contactor (G3J)
M: 3-phase motor
E1: 24 VDC power supply (S82K)
PLC: Programmable controller
(Used for monitoring. This is not a part of a safety system.)
Timing Chart

## An Example of Safety Circuits Where the F3SP-B1P Controller is Used For category 4 rating (F3SN-A, F3SH-A)/category 2 rating (F3SN-B)

Applicable operation mode

- Manual reset mode

S1: External test switch
S2: Interlock/lockout reset switch
S3: Lockout reset switch (If the switch is not necessary, connect between X1 and H1.)
KM1, KM2: Magnetic contactor (LP1D)
KM3: Solid-state contactor (G3J)
M: 3-phase motor
E1: 24 VDC power supply (S82K)
PLC: Programmable controller
(Used for monitoring. This is not a part of a safety system.)

## Timing Chart

Wiring for the Auto reset mode

Note: 1. If the EDM is not necessary, short-circuit T31 and T32.
2. For the number and arrangement of all terminals on the F3SP-B1P, see the instruction manual packaged together with the F3SP-B1P.

## An Example of Safety Circuits Where the G9SA-301 Safety Relay Unit is Connected For category 4 rating (F3SN-A, F3SH-A)/category 2 rating (F3SN-B)

Applicable operation mode

- Auto reset mode
- Disable the EDM monitor function
(by setting on the F39-MC11, see note 1)
- For safety relay unit
- Manual reset mode
- Use the feedback loop
- Use the emergency stop switch (see note 2)

Note: 1. The F39-MC11 setting console cannot be connected to the F3SN-B. Therefore, shortcircuit the auxiliary output terminal and the EDM input.
2. If emergency stop switch is not necessary, connect the OSSD 1 directly to T12 terminal and connect the OSSD 2 directly to T23 terminal.

## Timing Chart

## S1: External test switch

S2: Reset switch
S3: Emergency stop switch (positive opening mechanism) (A165E or A22E)
KM1, KM2: Magnetic contactor (LP1D)
KM3: Solid-state contactor (G3J)
M: 3-phase motor
E1: 24 VDC power supply (S82K)
PLC: Programmable controller (Used for monitoring. This is not a part of a safety system.)

## Examples of Safety Circuits Where G9SA-300-SC Safety Relay Unit is Connected

(1) For only safety light curtain in automatic reset mode For category 4 rating (F3SN-A, F3SH-A)/category 2 rating (F3SN-B)

S1: External test switch
KM1, KM2: Magnetic contactor (LC1D)
M: 3-phase motor
E1: 24 VDC power supply (S82K)

Timing Chart

Note: 1. F3SN-A's EDM function and auxiliary output cannot be used.
2. Normal operation is performed when the switch $S 2$ is released, and external diagnosis is performed when it is short-circuited.
3. Do not connect anything to the C1, D1, D2, E1, and E2 terminals.
(2) For only safety light curtain in manual reset mode

For category 4 rating (F3SN-A, F3SH-A)/category 2 rating (F3SN-B)

S1: Reset switch (momentary action switch)
S2: External test switch
KM1, KM2: Magnetic contactor (LC1D)
M: 3-phase motor
E1: 24 VDC power supply (S82K)

Timing Chart

Note: 1. F3SN-A's EDM function and auxiliary output cannot be used.
2. Normal operation is performed when the switch S 2 is released, and external diagnosis is performed when it is short-circuited.
3. Do not connect anything to the C1, D1, D2, E1, and E2 terminals.
(3) Safety light curtain connected with two channel limit switch inputs in automatic reset mode For category 4 rating (F3SN-A, F3SH-A)/category 2 rating (F3SN-B)

S1: Limit switch
S2: Safety limit switch with positive opening mechanism (D4D or D4B) $\Theta$
S3: External test switch
KM1, KM2: Magnetic contactor (LC1D)
M: 3-phase motor
E1: 24 VDC power supply (S82K)

Timing Chart

Note: 1. F3SN-A's EDM function and auxiliary output cannot be used.
2. Normal operation is performed when the switch $S 3$ is released, and external diagnosis is performed when it is short-circuited.
3. Do not connect anything to the C1, D1, D2, E1, and E2 terminals.
(4) Safety light curtain connected with two channel emergency stop switch inputs in manual reset mode For category 4 rating (F3SN-A, F3SH-A)/category 2 rating (F3SN-B)

S1: Emergency stop switch $\Theta$
S2: Reset switch (momentary action switch)
S3: External test switch
KM1, KM2: Magnetic contactor (LC1D)
M: 3-phase motor
E1: 24 VDC power supply (S82K)

Timing Chart

Note: 1. F3SN-A's EDM function and auxiliary output cannot be used.
2. Normal operation is performed when the switch $S 2$ is released, and external diagnosis is performed when it is short-circuited.
3. Do not connect anything to the C1, D1, D2, E1, and E2 terminals.

## Connection with F3SP-U2P Muting Controller For category 4 rating (F3SN-A, F3SH-A)

(1) When one safety light curtain and two muting sensors are used

Mode of F3SN-A/F3SH-A

- Auto reset mode
- Dark ON output to auxiliary output

Note: Can be rated to category 2 when the F3SN-B is connected.
(2) When two safety light curtains and eight muting sensors are used

When two safety light curtains are connected, the power consumption may exceed 24 W , the rated consumption of the F3SP-U2P.
As shown in the wiring diagram, connect an external 24 V power source directly to either one of the curtains.

Mode of F3SN-A/F3SH-A

- Auto reset mode
- Dark ON output to auxiliary output

Note: Can be rated to category 2 when the F3SN-B is connected.

## I/O Circuit

Circuit

Note: 1. Open: normal light emission, short to the +24 VDC: stops light emission
2. Refer to Wiring Diagram, Wiring for Sensor Only Configuration on page 15.
3. The section encircled with the dashed line is applied for models ending in -01 only.
4. The numbers in $O$ indicate pin numbers of the connectors.

The numbers in indicate pin numbers of the series connection connectors.

## Single-ended Connector Cable

## I/O Circuit

## Output waveform of the OSSD outputs

The OSSD outputs will be OFF as shown in the following figure in order to perform the OSSD circuit self-test when the light curtain is in the ON-state.

The OSSD circuit diagnosis is correct when this OFF signal is fed back. If the output signal does not contain an OFF signal, the receiver determines that there is an output circuit or wiring failure and goes into the lockout condition.

The number of OFF signals depends on the number of light curtains connected in series. (See the chart at left.)
In the same way, the OSSD outputs will be ON as shown in the following figure, to perform the OSSD circuit self-test when the light curtain is in the OFF-state. (See the chart below.)
Check the input response time of a machine connected to the F3SNA carefully to ensure the machine will not malfunction due to the OFF signal.

Note: This chart indicates the instance of 2 light curtains series connection.

| No. of light curtains <br> connected in series | No. of OFF signals within the <br> response time |
| :--- | :---: |
| No | 1 |
| 2 light curtains | 2 |
| 3 light curtains | 3 |

| Series connection | No. of ON signals within the <br> response time |
| :--- | :---: |
| No | 1 |
| 2 light curtains | 2 |
| 3 light curtains | 3 |

## Engineering Data (Typical Examples)

Parallel operating range
F3SN-A1107P14

Horizontal direction Vertical direction

Angular range (Angle of elevation) F3SN-A1107P14

Angular range (Angle of rotation) F3SN-A1107P14

## Correct Usage

This catalog is intended as a guide for product selection. Be sure to use the instruction manual provided with the product for actual operation.

## Regulations and Standards F3SN-A/F3SH-A

1. "Type Approval" specified in the Chapter 44. 2 of the Industrial Safety and Health Law in Japan does not apply to independent units of the F3SN-A/F3SH-A sensors. This law applies to systems incorporated with the sensor's.
When using the F3SN-A/F3SH-A sensor in Japan as "safety devices for presses or shearing machines" as specified in the Chapter 42 of the same law, apply for approval as a system.
2. (1) The F3SN-A/F3SH-A is electro-sensitive protective equipment (ESPE) in accordance with European Union (EU) Machinery Directive Annex IV, B, Safety Components, Item 1.
(2) The F3SN-A/F3SH-A complies with the following regulations and standards:
3. EU Regulations

- Machinery Directive: Directive 98/37/EC
- EMC Directive: Directive 89/336/EEC

2. European standards: EN61496-1 (TYPE 4 ESPE), prEN61496-2 (TYPE 4 AOPD)
3. International standards: IEC61496-1 (TYPE 4 ESPE), IEC61496-2 (TYPE 4 AOPD)
4. American standards: UL61496-1 (type 4 ESPE), UL61496-2 (type 4 AOPD), UL508, UL1998, CAN/CSA22.2 No. 14, CAN/CSA22.2 No. 0.8
5. JIS standards: JIS B9704-1 (type 4 ESPE), JIS B9704-2 (type 4 AOPD)
(3) The F3SN-A/F3SH-A received the following approvals from the EU accredited body DEMKO A/S:

- EC Type-Examination in accordance with the EU Machinery Directive (TYPE 4 ESPE)
- Certificate of a competent body for EMC
- DEMKO Type Approval Type 4 ESPE (EN61496-1) Type 4 AOPD (prEN61496-2)
(4) The F3SN-A/F3SH-A received the following approvals from the Third Party Assessment Body UL:
- Certificate of UL listing for US and Canadian safety standards Both of which are: TYPE 4 ESPE (UL61496-1), TYPE 4 AOPD (UL61496-2)
(5) The F3SN-A/F3SH-A received the following approvals from BG-PRUFZERT of Germany:
- BG test and approval mark License
Type 4 ESPE (EN61496-1)
Type 4 AOPD (prEN61496-2)

3. The F3SN-A/F3SH-A is designed according to the following standards. To make sure that the F3SN-A/F3SH-A complies with the following standards and regulations, you are asked to design and use it as provided by any other related standards, laws, and regulations. (Underlined regulations are applicable to the F3SN-A only.) Consult UL or other standardization bodies if you have any questions.

- EN415-4, prEN691, EN692, prEN693 (European standards)
- OSHA 29 CFR 1910. 212 (US Industrial Safety and Health Regulation)
- OSHA 29 CFR 1910. 217 (US Industrial Safety and Health Regulation)
- ANSI B11. 1-B11. 19 (US standard)
- ANSI/RIA 15. 06 (US standard)

## F3SN-B

1. "Type Approval" specified in the Chapter 44. 2 of the Industrial Safety and Health Law in Japan does not apply to independent units of the F3SN-B sensor. This law applies to systems incorporated with the sensors.
When using the F3SN-B sensor in Japan as a "safety device for presses or shearing machines" as specified in the Chapter 42 of the same law, apply for approval as a system.
2. (1) The F3SN-B is electro-sensitive protective equipment (ESPE) in accordance with European Union (EU) Machinery Directive Annex IV, B, Safety Components, Item 1.
(2) The F3SN-B complies with the following regulations and standards:
3. EU Regulations

- Machinery Directive: Directive 98/37/EC
- EMC Directive: Directive 89/336/EEC

2. European standards: EN61496-1 (TYPE 2 ESPE), prEN61496-2 (TYPE 2 AOPD)
3. International standards: IEC61496-1 (TYPE 2 ESPE), IEC61496-2 (TYPE 2 AOPD)
4. American standards: UL61496-1 (type 2 ESPE), UL61496-2 (type 2 AOPD), UL508, UL1998, CAN/CSA22.2 No. 14, CAN/CSA22.2 No. 0.8
5. JIS standards: JIS B9704-1 (type 2 ESPE), JIS B9704-2 (type 2 AOPD)
(3) The F3SN-B received the following approvals from the EU accredited body DEMKO A/S:

- EC Type-Examination in accordance with the EU Machinery Directive (TYPE 2 ESPE)
- Certificate of a competent body for EMC
- DEMKO Type Approval

Type 2 ESPE (EN61496-1)
Type 2 AOPD (prEN61496-2)
Use: EN954-1 Category B, 1, 2
(4) The F3SN-B received the following approvals from the Third Party Assessment Body UL:

- Certificate of UL listing for US and Canadian safety standards
Both of which are: Type 2 ESPE (UL61496-1),
Type 2 AOPD (UL61496-2)
(5) The F3SN-B received the following approvals from BGPRUFZERT of Germany:
- BG test and approval mark

License
Type 2 ESPE (EN61496-1)
Type 2 AOPD (prEN61496-2)
3. The F3SN-B is designed according to the following standards. To make sure that the F3SN-B complies with the following standards and regulations, you are asked to design and use it as provided by any other related standards, laws, and regulations.
Consult UL or other standardization bodies if you have any questions.

- EN415-4 (European standard)
- OSHA 29 CFR 1910. 212 (US Industrial Safety and Health Regulation)
- ANSI/RIA 15. 06 (US standard)

## - 1 Warning

## Detection zone and intrusion path

## [F3SN-A/F3SN-B Safety Light Curtain]

Install protective structures around the machine so that you must pass through the detection zone of the F3SN-A/F3SN-B to reach a hazardous part of the machine.

Install the F3SN-A/F3SN-B so that some part of the operator's body remains in the detection zone at all times when the operator works in a hazardous area. Failure to do so may result in serious injury.

## Correct Installation

A hazardous part of a machine can be reached only by passing through the sensor detection zone.

Some part of the operator's body remains in the detection zone while they are working.

## Incorrect Installation

A hazardous part of a machine can be reached without passing through the sensor detection zone.

A worker is between the sensor detection zone and a hazardous part of a machine.

## [F3SH-A Multi-beam Safety Sensor]

Install protective structures around the machine so that you must pass through the detection zone of the F3SH-A to reach a hazardous part of the machine.
If it is possible for an operator to get between the sensor's detection zone and the hazardous part of the machine, design the system so that machinery cannot start up automatically. Make sure that machinery cannot restart while the operator is in the hazardous area. Position the switch for restarting machinery in a location from which the status of the hazardous area can be seen clearly. The switch position location must be a place where the switch cannot be operated from within the hazardous area.
Failure to do so may result in serious injury.
Use of the fixed blanking function (F3SN-A only)
After setting the fixed blanking, check that the F3SN-A detects a test rod at any position in the detection zone through which a person can reach the hazardous part of the machine. If any positions are found by check above, install protective structures to prevent intrusion, which the F3SN-A can not detect.
Failure to do so may result in serious injury.

## Distances from reflective surfaces

Be sure to install the F3SN-A/F3SN-B/F3SH-A to minimize the effects of reflection from nearby surfaces.
Failure to do so may cause detection to fail and may result in serious injury.

Install the F3SN-A/F3SN-B/F3SH-A with minimum Distance D shown above from reflective surfaces (highly reflective surfaces) such as metal walls, floors, ceilings, and work pieces.

| Distance between <br> emitter and receiver <br> (Operating range L) | Minimum installation distance D |  |
| :--- | :--- | :---: |
|  | F3SN-A/ F3SH-A | F3SN-B |
| 0. 2 to 3 m | 0.13 m | 0.26 m |
| over 3 m | $\mathrm{L} / 2 \times \tan 5^{\circ}=\mathrm{L} \times 0.044(\mathrm{~m})$ | $\mathrm{L} / 2 \times \tan 10^{\circ}=\mathrm{L} \times 0.088(\mathrm{~m})$ |

## Safety distance

Always maintain a safe distance (S) between the light curtain and a hazardous part of a machine.

Failure to do so causes the machine to fail to stop before an operator reaches the dangerous area and may result in serious injury.

Use of the floating blanking increases the size of the detection capability. To calculate a safety distance, be sure to use the increased size of the detection capability.

Failure to do so causes the machine to fail to stop before an operator reaches the dangerous area and may result in serious injury.

The "safety distance" is the minimum distance that must be maintained between the F3SN-A/F3SN-B/F3SH-A and a hazardous part of a machine in order to stop the machine before someone or something reaches it. The safety distance is calculated based on the following equation when a person moves perpendicular to the detection zone of a light curtain.

Safety distance (S) = Intrusion speed into the detection zone (K)
$\times$ Total response time for the machine and light curtain ( T )

+ Additional distance calculated based on the detection capability of the light curtain (C).

The safety distance varies with national standards and individual machine standards. The equation is also different if the direction of intrusion is not perpendicular to the detection zone of the light curtain. Be sure to refer to related standards.

## [F3SN-A/F3SN-B Safety Light Curtain]

## <Reference>

Method for calculating safety distance as provided by European Norm EN999 (for intrusion perpendicular to the detection zone)

## Detection capability: $\mathbf{4 0 m m}$ or less

Substitute $\mathrm{K}=2000 \mathrm{~mm} / \mathrm{s}$ and $\mathrm{C}=8(\mathrm{~d}-14 \mathrm{~mm})$ in equation (1) and calculate as shown below.
$\mathrm{S}=2000 \mathrm{~mm} / \mathrm{s} \times(\mathrm{Tm}+\mathrm{Ts})+8(\mathrm{~d}-14 \mathrm{~mm})$.
Where: $S=$ Safety distance (mm)
$\mathrm{Tm}=$ Machine response time (s) (See note 1)
Ts = Light curtain response time (s) (See note 2)
$\mathrm{d}=$ Detection capability of the light curtain (mm)

e. g.:
$\mathrm{Tm}=0.05 \mathrm{~s}, \mathrm{Ts}=0.01 \mathrm{~s}, \mathrm{~d}=14 \mathrm{~mm}$ :
$\mathrm{S}=2,000 \mathrm{~mm} / \mathrm{s} \times(0.05 \mathrm{~s}+0.01 \mathrm{~s})+8(14 \mathrm{~mm}-14 \mathrm{~mm})=$ 120 mm

Use $S=100 \mathrm{~mm}$ if the result of equation (2) is less than 100 mm . Recalculate using the following equation with $\mathrm{K}=1600 \mathrm{~mm} / \mathrm{s}$ if the result is over 500 mm .

$$
\begin{equation*}
\mathrm{S}=1600 \mathrm{~mm} / \mathrm{s} \times(\mathrm{Tm}+\mathrm{Ts})+8(\mathrm{~d}-14 \mathrm{~mm}) . \tag{3}
\end{equation*}
$$

Use $S=500 \mathrm{~mm}$ if the result from equation (3) is less than 500 mm .

## Detection capability: over 40 mm

Substitute $K=1600 \mathrm{~mm} / \mathrm{s}$ and $\mathrm{C}=850 \mathrm{~mm}$ in equation (1) and calculate as shown below.

```
S = 1600 mm/s \times (Tm + Ts ) + 850
Where: S = Safety distance (mm)
    Tm = Machine response time (s) (See note 1)
    Ts = Light curtain response time (s) (See note 2)
e. g.:
Tm}=0.05\textrm{s},\textrm{Ts}=0.01\textrm{s}
S = 1600 mm/s \times (0.05 s + 0.01 s) + 850 mm = 946 mm
```

Note: 1. The machine response time refers to the maximum time from the moment the machine receives a stop signal to the moment the hazardous part of the machine stops. The machine response time should be measured on actual machines. The machine response time should be measured and confirmed periodically.

## Response Time Table

| Model | Protective <br> height <br> (mm) | Number <br> of beams | Response time <br>  |  |
| :--- | :--- | :--- | :--- | :--- |
|  |  |  |  |  |
| F3SNA $\square \square \square \square$ <br> P14(-01) | 180 to 450 | 20 to 50 | 10.0 | 40 |
|  | 459 to 765 | 51 to 85 | 12.5 | 50 |
|  | 774 to 1080 | 86 to 120 | 15.0 | 60 |
|  | 1089 to 1125 | 121 to 125 | 15.5 | 62 |

| Model | Protective height (mm) | Number of beams | Response time |  |
| :---: | :---: | :---: | :---: | :---: |
|  |  |  | ON to OFF | OFF to ON |
| F3SN-A $\square \square \square \square$ | 217 to 772 | 13 to 50 | 10.0 | 40 |
| P25(-01) | 787 to 1297 | 51 to 85 | 12.5 | 50 |
| P25 | 1312 to 1822 | 86 to 120 | 15.0 | 60 |

| Model | Protective <br> height <br> (mm) | Number <br> of beams | Response time <br>  |  |
| :--- | :--- | :--- | :--- | :--- |
| ON to <br> OFF |  |  |  |  |
| F3SN-A $\square \square \square \square$ <br> P40(-01) <br> F3SN-B $\square \square \square \square$ <br> P40 | 217 to 757 | 7 to 25 | 10.0 | 40 |
|  | 787 to 1297 | 26 to 43 | 12.5 | 50 |
|  | 1327 to 1807 | 44 to 60 | 15.0 | 60 |

| Model | Protective <br> height <br> (mm) | Number <br> of beams | Response time <br>  |  |
| :--- | :--- | :--- | :--- | :--- |
| ON to <br> OFF |  |  |  |  |
| F3SN-A $\square \square \square \square$ <br> P3S(-01) <br> F3SN-B $\square \square \square \square$ <br> P70 | 277 to 757 | 5 to 13 | 10.0 | 40 |
|  | 817 to 1297 | 14 to 22 | 12.5 | 50 |
|  | 1357 to 1777 | 23 to 30 | 15.0 | 60 |

- Response time for series connected types is calculated as follows: (F3SN-A)
For 2 sets:
Response time (ON to OFF): Response time of Light curtain 1 + Response time of Light curtain $2+3 \mathrm{~ms}$ Response time (ON to OFF): Response time of Light curtain 1 + Response time of Light curtain $2+12 \mathrm{~ms}$ For 3 sets:
Response time (ON to OFF): Response time of Light curtain $1+$ Response time of Light curtain $2+$ Response time of Light curtain $3+4 \mathrm{~ms}$
Response time (ON to OFF): Response time of Light curtain 1 + Response time of Light curtain 2 + Response time of Light curtain $3+16 \mathrm{~ms}$
- Response time of F3SP-B1P is 10 ms , operation time is 100 ms .

2. The light curtain response time refers to the time required for output to change from ON to OFF.
3. When using the F3SP-B1P, determine the safety distance by adding the response time of the F3SP-B1P to that of the F3SN given in the table above.

## <Reference>

## Method for calculating the safety distance as provided

 by ANSI B11. 19 (US)Safety distance (S) = Intrusion speed into the detection zone (K)
Response time (Ts + Tc + Tr + Tbm) + Additional distance (Dpf)
Where:
$\mathrm{K}=$ Intrusion speed (Recommended value in OSHA standards is $1600 \mathrm{~mm} / \mathrm{s}$ )
ANSI B11. 19. does not define Intrusion speed (K). When determining K , consider possible factors including physical ability of operators.
Ts = Time required for machine to stop (s)
$\mathrm{Tr}=$ Light curtain response time (s) (See note)
$\mathrm{Tc}=$ Maximum response time required for machine control circuit to apply brake (s)
Tbm = Additional time (s)
If the machine is provided with a brake monitor, $\mathrm{Tbm}=$ brake monitor setting time - (Ts + Tc). If not provided with a brake monitor, it is recommended to determine a value more than $20 \%$ of ( $\mathrm{Ts}+\mathrm{Tc}$ ) as the additional time.
Dpf =Additional distance. Dpf is calculated as follows based on ANSI standards.
$\mathrm{Dpf}=3.4 \times(\mathrm{d}-7.0)$
: d is the detection capability of the light curtain (mm).
e. g.:

Assume that: $\mathrm{K}=1600 \mathrm{~mm} / \mathrm{s}, \mathrm{Ts}+\mathrm{Tc}=0.06 \mathrm{~s}$,
Brake monitor setting time $=0.1 \mathrm{~s}, \operatorname{Tr}=0.01 \mathrm{~s}, \mathrm{~d}=14 \mathrm{~mm}$.
Then:
Tbm $=0.1-0.06=0.04 \mathrm{~s}$
Dpf $=3.4-(14-7.0)=23.8 \mathrm{~mm}$
$\mathrm{S}=1600 \times(0.06+0.01-0.04)+23.8=199.8 \mathrm{~mm}$
Note: The light curtain response time refers to the time required for output to change from ON to OFF.

## <Reference>

Method for calculating the safety distance as provided by ANSI/RIA R15.06 (US) (for intrusion perpendicular to the detection zone)
Safety distance (Ds) $=\mathrm{K} \times(\mathrm{Ts}+\mathrm{Tc}+\mathrm{Tr})+\mathrm{Dpf}$
Where:
$\mathrm{K}=$ Intrusion speed: $1600 \mathrm{~mm} / \mathrm{s} \mathrm{min}$.
Ts = Maximum stop time of machine/equipment (s)
Tc = Maximum stop time of control system (s)
$\mathrm{Tr}=$ Light curtain response time (s)
Os = Diameter of the smallest detectable object (mm)
Dpf = Additional distance (mm)
Assume that the sensor is installed with the lowest beam height above the floor at 300 mm and the highest beam height above the floor at 1200 mm , with the diameter of the smallest detectable object being 64 mm or less. Then, Dpf is determined from:
Dpf $=3.4 \times(\mathrm{Os}-6.875 \mathrm{~mm})$.
If the diameter of the smallest detectable object is more than 64 mm , Dpf is calculated to be 900 mm .

## e. g.:

- F3SN-B $\square \square \square \square$ P40 Safety Light Curtain

Assume that $\mathrm{K}=1600 \mathrm{~mm} / \mathrm{s}, \mathrm{Ts}+\mathrm{Tc}=0.06 \mathrm{~s}, \mathrm{Tr}=0.01 \mathrm{~s}$, and $\mathrm{Os}=40 \mathrm{~mm}$.
Then:
$S=1,600 \times(0.06+0.01)+D p f$
$=1,600 \times(0.06+0.01)+3.4(40-6.875)$
$=225 \mathrm{~mm}$

- F3SN-B $\square \square \square \square$ P70 Safety Light Curtain

Assume that $\mathrm{K}=1600 \mathrm{~mm} / \mathrm{s}, \mathrm{Ts}+\mathrm{Tc}=0.06 \mathrm{~s}, \mathrm{Tr}=0.01 \mathrm{~s}$, and Dpf $=900 \mathrm{~mm}$.
Then:
$S=1600 \times(0.06+0.01)+900$
$=1012 \mathrm{~mm}$
Note: The light curtain response time refers to the time required for output to change from ON to OFF.

## [F3SH-A Multi-beam Safety Sensor]

## <Reference>

Method for calculating safety distance as provided by European Norm EN999 (for intrusion perpendicular to the detection zone)

Substitute $K=1600 \mathrm{~mm} / \mathrm{s}$ and $\mathrm{C}=850 \mathrm{~mm}$ in equation (1) and calculate as shown below.

$$
\mathrm{S}=1600 \mathrm{~mm} / \mathrm{s} \times(\mathrm{Tm}+\mathrm{Ts})+850
$$

Where:
$\mathrm{S}=$ Safety distance ( mm )
$\mathrm{Tm}=$ Machine response time (s) (See note 1)
Ts = Sensor response time (s) (See note 2)
e. g.:
$\mathrm{Tm}=0.05 \mathrm{~s}, \mathrm{Ts}=0.01 \mathrm{~s}$ :
$\mathrm{S}=1600 \mathrm{~mm} / \mathrm{s} \times(0.05 \mathrm{~s}+0.01 \mathrm{~s})+850 \mathrm{~mm}=946 \mathrm{~mm}$
Note: 1. The machine response time refers to the maximum time from the moment the machine receives a stop signal to the moment the hazardous part of the machine stops. The machine response time should be measured on actual machines. The machine response time should be measured and confirmed periodically.
2. The sensor response time refers to the time required for output to change from ON to OFF.

## Installation

## How to prevent mutual interference

The emitter and the receiver to be set facing each other should be a pair of the same set. Erroneous combination may create a zone where objects cannot be detected.

Do not use the sensors for a system where the beam is reflected, or object detection may be disabled. In such an application, use a beam path diversion mirror to prevent the beam reflected from an object from entering the receiver.

When installing two or more pairs of the F3SN-A/F3SN-B/F3SHA, take necessary measures to prevent mutual interference. Examples of such measures include electrical interconnection and the use of baffle plates.

## Correct Use

## Installation

How to prevent mutual interference
Series connection (Up to 3 sets, 240 beams, sensor models ending in -01, -03, -04, and -05 are required for series connection)

Two or more pairs of the F3SN-A can be connected in series. When connected in series, the F3SN-A sensors generate beams in a timesharing manner. Thus, they prevent mutual interference and ensure safety.

Correct

## When not connected

When installing two or more pairs of light curtains independently from each other due to inconvenience of wiring or other reason, take proper measures to prevent mutual interference. If mutual interference occurs, a lockout condition will result for the F3SN-A/F3SN-B/ F3SH-A.

- Installation which may cause mutual interference

- Installation to prevent mutual interference
(1) Install so that the two light curtains emit in the opposite directions (staggered).

(2) Install a light interrupting wall in between sensors.

(3) Install the light curtains facing away from the one another to eliminate mutual interference.

| Distance between <br> emitter and receiver <br> (Operating range L) | Minimum installation distance D |  |
| :--- | :--- | :---: |
|  | F3SN-A/ F3SH-A | F3SN-B |
| $\mathbf{0 . 2 ~ t o ~ 3 ~ m ~}$ | 0.26 m | 0.52 m |
| over 3 m | $\mathrm{L} \times \tan 5^{\circ}=\mathrm{L} \times 0.088(\mathrm{~m})$ | $\mathrm{L} \times \tan 10^{\circ}=\mathrm{L} \times 0.18(\mathrm{~m})$ |

(4) Use a F39-HS spatter protection slit cover.

## Operating range

If the distance between the emitter and the receiver is less than 0.2 m , there is a possibility of chattering. Be sure to use the sensors within the rated operating range.
