

SYSMAC CVM1

The Perfect Programmable Controller for Large-scale Machine Control

I igh-speed Control for Large-scale Machinery with the SYSMAC CVM1

The SYSMAC CVM1 brings intelligence to large-scale machine control. A faster and more complete instruction set simplifies process control, data processing, and other control tasks. And there's plenty of I/O capacity to handle large-scale systems with CPU models that support up to 2,048 local I/O points. You also get three-level network communications with SYSMAC LINK, Controller Link, and/or Ethernet networks to easily achieve high-speed system control. The SYSMAC CVM1 is the ideal Programmable Controller for machine control in systems requiring data processing.

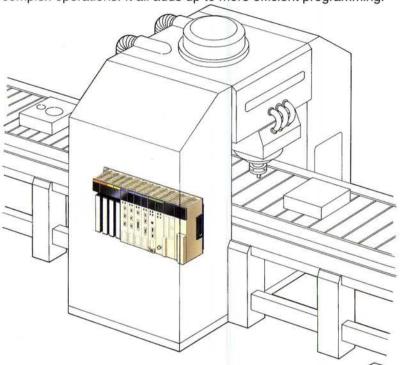

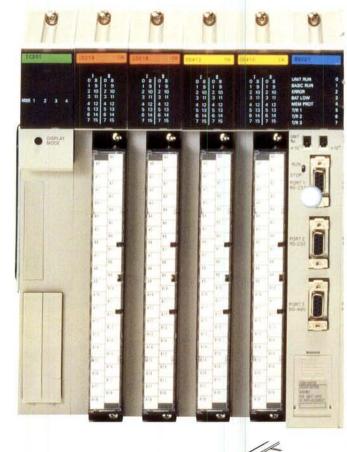

B etter Functionality

Simplify Complex Control Operations with New Instructions (125 Instructions with 204 Variations)

Floating-point arithmetic, symbol math, PID, and many other new instructions have been added to simplify everything from data processing and process control through high-speed positioning and other complex operations. It all adds up to more efficient programming.

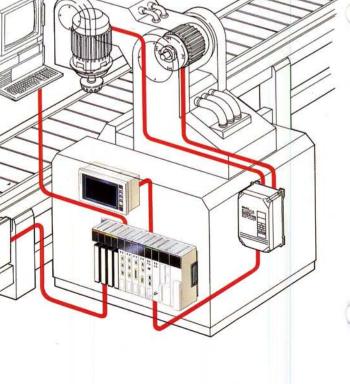

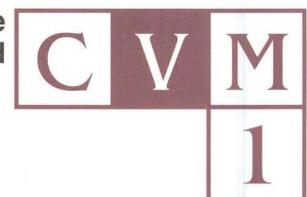

Capacity to Handle Large-scale Control:

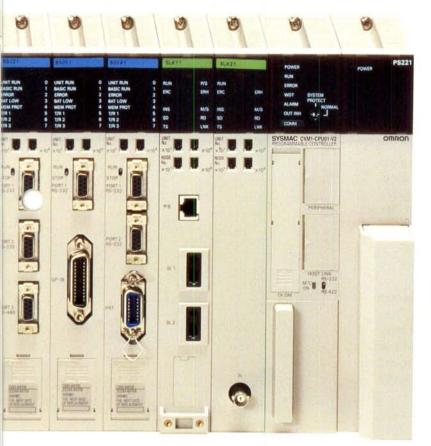

New CPU with 2,048 I/O Point Capacity

A 62K-word user memory and 24K-word data memory also provide the added capacity needed to handle complex operations for large-scale control.

Easier, Simpler Large-scale Control with Advanced PLC Intelligence

System Control through Advanced Units

A Motion Control Unit (scheduled for release soon) provides 4-axis position control capability, while a Personal Computer Unit places DOS right on the PLC Rack (see page 11). And a Temperature Controller Data Link Unit manages data from multiple temperature controllers. These, and other CPU Bus Units achieve easy system control.

SYSMAC C-series Compatibility

The SYSMAC Support Software allows you to program ladder diagrams that can be used both for the CVM1 and for C-series PLCs.

■ More Features for Powerful Large-scale Machine Control

High Speed and Capacity

You get basic instructions processed in 0.125 μ s, 64K words of user memory, 24K words of data memory, up to 2,048 local I/O points, up to 2,048 SYSMAC BUS remote I/O points, and up to 2,048 SYSMAC BUS/2 remote I/O points.

Expandable Data Memory

Expansion Data Memory can be added to increase the data memory capacity to up to 256K words (32K words x 8 banks).

Standard Memory Card Interface

Memory Cards enable easy and rapid production line switchovers. Data can also be written from Memory Cards to EEPROM in the CPU.

Error Logs

An internal clock can be used to store up to 20 records of time-tagged error information to greatly facilitate managing operating status.

Standard RS-232C Port

An RS-232C port is provided in addition to the peripheral port to enable direct connection to personal computers, Programmable Terminals, and other RS-232C devices.

High-speed Programmable Terminal Communications

A special NT link enables high-speed communications with NT-series Programmable Terminals for real-time screen displays and inputs.

Expansion I/O via One Cable

When only one Expansion I/O Rack is required, it can be connected via a single cable without the use of any special interface units.

omplete Communications

High-speed Communications

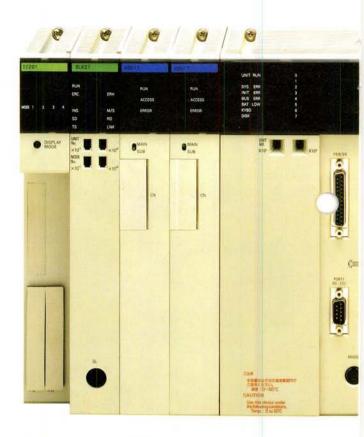

Various networks provide communications designed for essentially every level of FA production: between PLCs, between PLCs and host computers, or between PLCs and other system components. High-speed communications processed asynchronously with the PLC's cycle time are also possible.

Communications Across Three Hierarchies

Connect Programming Devices to monitor and program the local node or go through Host Link, SYSMAC LINK, Controller Link, Ethernet, or SYSMAC BUS/2 networks to monitor and program other nodes. You can also connect Programming Devices to Remote I/O Racks or Expansion I/O Racks to enable monitoring and programming across networks.

Ethernet

The CVM1 communicates easily with computers via an Ethernet network using the TCP/IP or UDP/IP international protocols. The CVM1's Ethernet Unit also supports a File Transfer Protocol, which enables file transfers as well. FINS (Factory Interface Network Service), a message communications protocol developed by OMRON for its FA controllers, also enables easy reading and writing of PLC memory.

■ CPU Bus Units Let You Take Full Advantage of FA Networks

SYSMAC LINK Unit

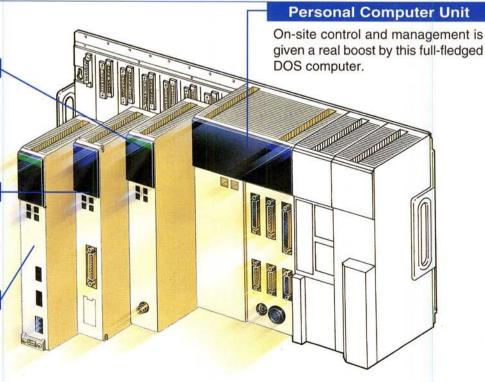

The SYSMAC LINK Unit is OMRON's basic communications unit and it enables peer-to-peer PLC communications.

Ethernet Unit

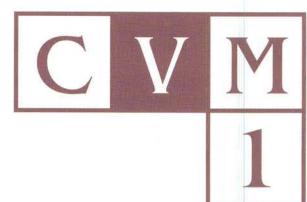

For information level networks, the Ethernet Unit enables direct connection to personal computers.

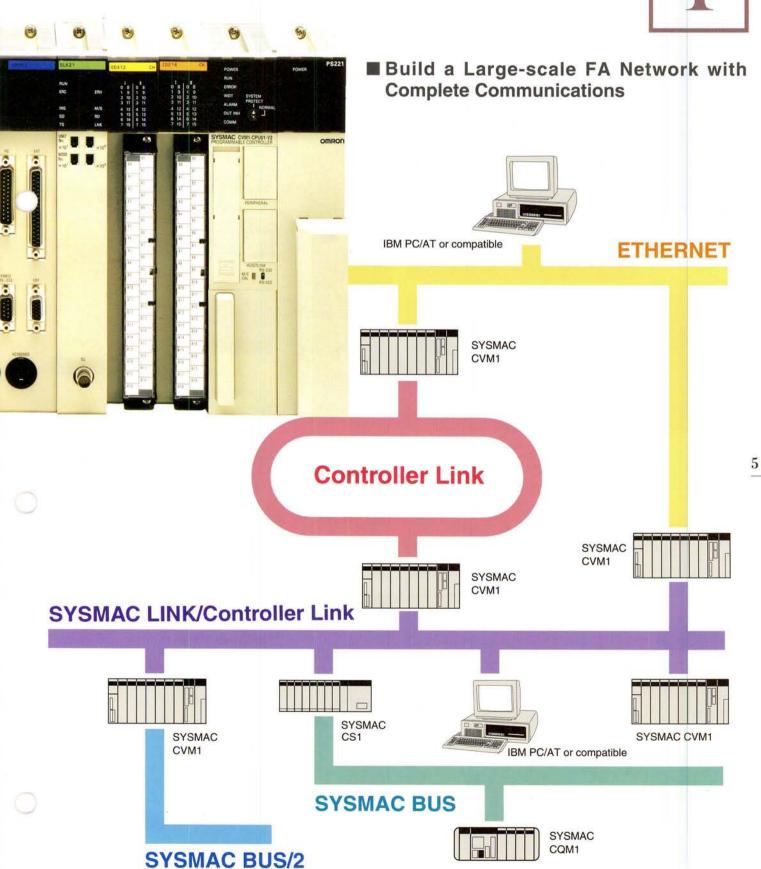

Controller Link Unit

For main control-level networks, the Controller Link Unit enables connection to a wide range of FA devices.

CVM1 Communications for Systemized Production Facilities

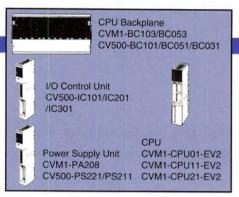

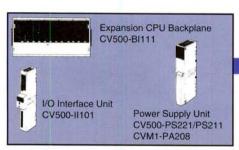

ystem Configuration

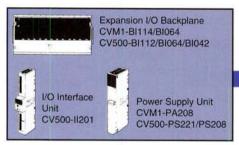

Select from a wide range of units for large-scale machine control system-oriented control, and essentially any special need.

Mount a 4-slot DOS Computer to the Rack to Manage Data More Effectively than Ever Before

Personal Computer Unit

CV500-VP213-E (4-MB memory; w/o floating-point processor) CV500-VP217-E (8-MB memory; w/o floating-point processor) CV500-VP223-E (4-MB memory; w/floating-point processor) CV500-VP227-E (8-MB memory; w/floating-point processor) [486 SX: W/O floating-point processor]

[486 SX: W/O floating-point processor]
[486 DX: W/ floating-point processor]

On-Rack PLC

Mount directly to the Rack without any extra wiring while saving the space required for a separate computer. You also get faster SYSMAC communications.

Hard Disk Drive Unit

To save even more space, the 80-MB hard disk also mounts directly to the Rack. You can mount up to two Units to provide extra storage space.

Complete Peripherals

Connect the peripherals required by your system just as you would for a stand-alone computer: displays, keyboard, drives, etc.

DOS Software

You can run any of a wide range of IBM PC/AT compatible software available world-wide (VGA compatible).

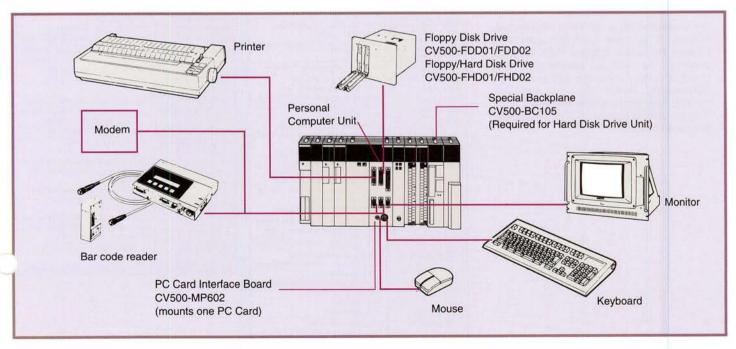

Advanced Development Environment

Standard function libraries include BASIC and C languages to support your software development needs.

With the Personal Computer Unit, you can mount a full-fledged DOS computer right to the Rack to take advantage of networking and support production line monitoring and control.

C

PU Bus Units for Communications

Ethernet Unit

CV500-ETN01

The CV-series Ethernet Unit supports the TCP/IP or UDP/IP international protocols to enable the PLC to connect to an Ethernet network without going through a personal computer. The Ethernet Unit also supports a built-in File Transfer Protocol, which enables file transfers between the PLC and host computers. FINS commands also enable any host computer connected to the Ethernet Unit to easily read and write PLC memory. Finally, RAS functions ensure reliable operation.

Specifications

	Item	Specifications
Transmission	Medium access method	CSMA/CD
specifications	Modulation	Base band
	Transmission path	Bus
	Baud rate	10 Mbit/s
	Transmission medium	Coaxial cable
	Transmission distance	500 m max./segment; 2.5 km max./network
	Number of connectable nodes	100 nodes/segment
	Distance between nodes	Multiples of 2.5 m
	Transceiver cable length	50 m max.
	Transceiver power supply capacity	0.35 A at 12 V
Communications services		TCP/IP and UDP/IP socket services FINS communications FTP server
RAS (Reliability, Availability, and Safety) functions		PING command (echo request via ICMP) PING response (echo response via ICMP) Internode tests Error logs Self-diagnostic functions (hardware operation check) Network status reads (via FINS commands)

Controller Link Units

CVM1-CLK21 (Coaxial cable)

CVM1-CLK12/52 (Optical fiber)

The Controller Link is OMRON's main FA-level network. It supports automatic data links between PLCs and between PLCs and host computer, as well as programmed data transfers using a message service. You get high-capacity, flexible data links and high-capacity data transfers with messages. For a low-cost communications system, twisted-pair cables can be used.

Wired System (CVM1-CLK21)

Items	Specifications
Communications method	N:N token bus
Code	Manchester code
Modulation	Baseband code
Synchronization	Flag synchronization (conforms to HDLC frames)
Transmission path	Multi-drop bus
Baud rate and maximum transmission distance	The maximum transmission distance varies with the baud rate as follows: 2 Mbps: 500 m 1 Mbps: 800 m 500 Kbps: 1 km
Media	Specified shielded twisted-pair cable Number of signal lines: 2, shield line: 1
Node connection method	PLC: Connected to a terminal block IBM PC/AT or compatible: Connected via a special connector (included)
Maximum number of nodes	32 nodes
Communications functions	Data links and message service
Number of data link words	Transmission area per node: 1,000 words (2,000 bytes) max. Data link area in one C200HX/HG/HE, CVM1, CV-series, or CCM1H-series PLC (send/receive): 8,000 words (16,000 bytes) max. Data link area in one CS1-series PLC (send/receive): 12,000 words (24,000 bytes) max. Data link area in one IBM PC/AT or compatible (transmission/reception): 32,000 words (64,000 bytes) max. Number of data link words in one net- work (total transmission): 32,000 words (64,000 bytes) max.
Data link areas	Bit areas (IR, AR, LR, CIO), data memory (DM), and extended data memory (EM)
Message length	2,012 bytes max. (including the header)
RAS functions	Polling node backup function Self-diagnosis function (hardware checking at startup) Echoback test and broadcast test (us- ing the FINS command) Watchdog timer Error log function
Error control	Manchester code check CRC check (CCITT X ¹⁶ + X ¹² + X ⁵ + 1)

Optical Ring System (CVM1-CLK12/52)

Items	Specifications	
Туре	Optical Ring (H-PCF cable)	
Communications method	N:N token-ring method (token-ring mode) N:N token-bus method (token-bus mode)	
Code	Manchester code	
Modulation	Baseband code	
Synchronization	Flag synchronization (conforms to HDLC frames)	
Transmission path	Ring method (token-ring mode) Daisy-chain method (token-bus mode)	
Transmission speed	2 Mbps	
Maximum transmission distance	20 km	
Maximum distance between nodes	Crimp cut: 800 m Adhesive: 1 km (See note 1.)	
Medium	H-PCF cable (optical two-core cable	
Node connection method	Connected via a special (full-lock connector) connector. (A half-lock connector can also be used.)	
Maximum number of nodes	62 nodes (See notes 2 and 3.)	
Applicable Programming Devices	Controller Link Support Software (Ver. 2.00 or later) and CX-Net in CX-Programmer (See note 3.)	
Communications functions	Data links and message service	
Number of data link words	Transmission area per node: 1,000 words max. Data link area (send/receiver) that can be created for one CVM1 or CV-series PLC: 8,000 words max. Data link area (send/receive) that can be created for one CS1-series PLC: 12,000 words max. Number of data link words that can be used in one network (total transmission): 62,000 words max. (See note 2.)	
Data link areas	Bit areas (CIO, AR, LR), DM, EM (See note 4.)	
Message length	2,012 bytes max. (including the header)	

CV500-SLK21 (Coaxial cable)

SYSMAC LINK Systems enable high-speed, large-scale data links between PLCs or between PLCs and host computers in either a wired or optical network. Bridges can be used to communicate between interconnected SYSMAC LINK networks, or the PLC gateway function can be used to communicate with PLCs on SYSMAC BUS/2 networks, enabling centralized system management from a host computer.

Specifications

Item	Specifications		
Model	CV500-SLK21 (coaxial)	CV500-SLK11 (optical)	
Method	N:N token ring		
Transmission path	Bus	Daisy chain	
Baud rate	2 Mbps		
Transmission distance	1 km total	800 m between nodes, 10 km total	
Transmission cable	Coaxial cable (5C-2V)	2-core optical fiber cable (H-PCF)	
Number of connecting nodes	62 max.		
Connector	BNC connector	Full- or half-lock crimping style connector	
Link services	Datalink and message service		
Data link words	2,966 words max. (in I/O Area + DM Area)		
Message length	542 bytes max. (excluding the header)		
Send buffer capacity	1 message		
Receive buffer capacity	2 messages		
RAS (Reliability, Availability, and Safety) functions	Automatic polling unit backup Self-diagnostics (internode tests) Node bypasses (optical system) using power supply Watchdog timer Error detection (CRC-CCITT: Generating function = X ¹⁶ + X ¹² + X ⁵ + 1) Error log		

SYSMAC BUS/2 Remote I/O Units

SYSMAC BUS/2 Remote I/O Master Unit CV500-RM211 (optical) CV500-RM221 (wired)

SYSMAC BUS/2 Remote I/O Slave Unit CV500-RT211 (optical) CV500-RT221 (wired)

SYSMAC BUS/2 Systems provide high-speed bus networks that can be used to connect the PLC to I/O devices and FA components. They effectively reduce the time and expense of wiring distributed controls and increase system maintenance efficiency by enabling remote monitoring and programming.

Specifications

Item	Specifications	
	Wired Units	Optical Units
Transmission medium	Special shielded twisted-pair cable	2-core optical fiber cable (H-PCF)
Communications method	1:N polling and selection	
Data transfer speed	1.5 Mbps	
Transmission path	Multidrop	Daisy chain or loop
Transmission distance	500 m total length	Total length: 10 km; Between nodes: 1 km with purchased connector-equipped cables or 800 m with user-produced cables
Max. I/O capacity on Slave Racks	CVM1-CPU01-EV2: 1,024 pts CVM1-CPU11-EV2: 2,048 pts CVM1-CPU21-EV2: 2,048 pts	

SYSMAC BUS Remote I/O Units

(optical) C500-RM201 (wired)

Remote I/O Master Unit Remote I/O Slave Unit 3G2A5-RM001-(P)EV1 3G2A5-RT001/002-(P)EV1 (optical) 3G2A5-RT201 (wired)

SYSMAC BUS Systems enable communications between the PLC and controllers/components with reduced wiring time and expense, and are ideal for large-scale distributed control or any other time remote I/O processing is required. Select either a wired or optical system to suit your needs. With an optical system, I/O Link Units can also be used to easily transfer data between PLCs.

Specifications

Item	Specifications		
	Wired Units	Optical Units	
Transmission medium	Twisted-pair cable	2-core optical fiber cable	
Communications method	2-line half duplex	Time-shared multiplex cyclic system	
Data transfer speed	187.5 kbps		
Transmission path	Multidrop	Daisy chain or loop	
Transmission distance	200 m total length	Total length: 6.4 km; Between nodes: 800 m max.	
Max. I/O capacity on Slave Racks	CVM1-CPU01-EV2: 512 pts CVM1-CPU11-EV2: 1,024 pts CVM1-CPU21-EV2: 2,048 pts
