"Safe" "Simple" "Visible"
Safety controller with no need for programming

Safety Controller

# Safety, Simplicity, and Visibility in New-generation Safety Controllers 

OMRON believes the fundamentals for building risk-free workplace environments are safety, simplicity, and visibility.

Design and implementation of safety measures and policies can be readily achieved through proven safety procedures using simple connections.
Peace of mind is attained by communicating safety equipment status information (see note) in a form that is meaningful to the on-site operational and maintenance staff supporting the system. The F3SX evolves from this philosophy.

Information:

1. Indicator output with self-diagnostic functions clearly communicates proximity warnings and work permission during operation to the operator
2. The lighting patterns of the Safety Controller's indicators allow the operator to read the ON/OFF status of safety equipment I/O as well as error type information.
3. RS-232 communications can be used to read detailed information for the above status.

## What is a Safety Controller?

## Are Your Safety Inputs Connected to Your PLC Built with Interlocks?

Generally, safety is jeopardized in PLCs and other programmable control devices due to partial memory loss, CPU runaways, and situations such as on-site overwriting of programs. Using Safety Light Curtains and Safety-door Switches on their own does not necessarily ensure sufficient safety for PLC operation. Nor is safety fully secured through the use of relays in interlocks due to hazardous events that occur as a result of fused relays or short-circuited wiring.
The F3SX offers safe and simple connections for an array of safety equipment, such as Safety Light Curtains and Safety-door Switches, functioning as a central hub to perform integrated monitoring of various safety equipment.

## Select from Two Main Modules to Suit the Application

## Configuration

## The Modular Configuration Fits Your Equipment Perfectly. An All-in-one Solution for Delivering Required I/O

## Combine up to Five Modules as a Single Controller

## (A Main Module must be included.)

Note 1: Up to four sets of F3SN-A/B Safety Light Curtains/F3SH Multi-beam Safety Sensors can be supplied power from the F3SX. Consider this factor when selecting and wiring the Safety Controller. Up to four Modules can be connected if the Safety Light Curtains/Multi-beam Safety Sensors are supplied power directly from an external power supply.
2: To set the delay time, use the Function Setup Software for the F3SX or specify a model with the -T $\square \square \square$ suffix.

## Safe!

## The Safety Controller Complies with Global Safety Standards

In addition to International standards (IEC), the F3SX also conforms to European (EN), U.S./Canadian (UL) and Korean (KOSHA), safety standards, S-Mark, enabling trouble-free use in machinery for Europe, the U.S., and Canada.
Applicable Standards

- European Machinery Directive 98/37/EC,

Low Voltage Directive 73/23/EEC

- IEC 615081998 (EN 61508 2001) (SIL 1-3)
- EN 954-1 1996 (Category B 1-4)
- EN 50178 1997, UL 508, UL 1998, etc.

## Simple

## Connection is Easy Using Plug-in Connectors for Even More Readily Accessible Safety

- No unnecessary wiring between Units allows considerable cuts in the cost of evaluating design safety.
- Reduced wiring, post terminals, and connector connections enable substantial reductions in the cost of maintenance labor
- Width has been reduced by $50 \%$ from 225 mm to 112.5 mm max. (compared to previous OMRON products; connecting F3SN (4 sets), F3SP-B1P, and G9SB-301).
- Post terminals aid in Convenient F39-TB01 Junction Box for Safety Light Curtain. preventing unintentional neglect to tighten terminal screws.

The wire colors are for reference purposes only. Refer to individual international standards for details.

Connector Cable for Safety Light Curtains

## Visible

## Providing Meaningful Safety Equipment Information that Satisfies Needs for Safety and Peace of Mind

Previously
Majority of time lost due to failures is from investigating the causes. In particular, most time is spent in determining the location of broken lines or faulty contacts.

Indicator Displays Are Easy to Understand and More Convenient

F3SX
Shorter Downtimes!

The F3SX uses indicators to show the status of each I/O, contributing
to less time (downtime) spent investigating the cause.
Electromagnetic Locking Door Switch

## Convenient Auxiliary Functions: SSC Input and Three Auxiliary Outputs

## Simple and Easy Construction of an Operation Standby Circuit

The operation standby circuit is provided to prevent unexpected behavior at startup. The F3SX's own standby signal (see note) output from AS3 is input to SSC via the Programmable Controller's (PLC's) RUN contact and pneumatic standby contact, enabling the condition of the external device to be monitored.

Note: AS1, AS2, and AS3 are auxiliary outputs.

## - F3SX-N Settings

AS1: Safety output monitor AS2: Information trigger
AS3: Standby $\qquad$ - F3SX-E Settings AS1: Safety output monitor AS2: Ready output AS3: Standby

Outputs synchronously with the safety output (when the safety output turns ON, AS1 turns ON). Outputs during F3SX lock out and simultaneous monitoring errors between systems. Outputs when F3SX CPU Unit is initialized and operation is normal.

Outputs synchronously with the safety output (when the safety output turns ON, AS1 turns ON). Outputs when safety inputs are all ON.
Outputs when the F3SX CPU Unit is initialized and operation is normal. (Same as F3SX-N)

The SSC input is a non-safety input used to permit startup. A $24-\mathrm{V}$ power supply is always applied to this terminal. The interlock can also be started only when the standby signal (AS3) is input. If the input opens, the output will stop, and reset status will be activated. For details, refer to the User's Manual (Cat. No. SCHG-705B).

- Operation standby turns OFF power supply section.
- The individual interlocks stop power individually. In the configuration shown at the right, the individual stops and complete stop can be used separately.

## Read Information for Multiple Units

Information can be read using multi-drop connections with an RS-232C/RS-485 Converter (see note.)
Note: The unit number setting must be set using the Function Setup Software for the F3SX.

Select a G7SA, G7S, or G7S-E according to the output capacity. Socket types can be used for trouble-free replacement.

## Stop Commands Can Be Sent from Non-Safety Devices (Sending PLC OUT Signal to SSC)

By inputting a signal from the PLC to the SSC terminal of the F3SX, a stop command can be received from a non-safety device. This assists in determining the cause of a failure while also simplifying wiring.

## Applications Using Electromagnetic Lock Switches and Safety Light Curtains for Detecting Workers Appication

Simple External Stop Input Connection

When an electromagnetic lock and Safety Light Curtain (worker detection) are used, as shown in the diagram, an external stop command input is required in addition to the Emergency Stop Switch.
Inputting a PLC operation command to the SSC input allows easy connection and control. Causes of failures can be determined from detailed communications data, which safeguards against any problem that may occur.

## Indicator Lighting Pattern Shows Lock Release Timing to Operator

External indicator output lighting patterns can be utilized as work permission indicators. When equipment stops, the indicator turns ON. During OFF delays, indicator flashing gradually increases speed as the remaining time shortens to notify the operator of release timing. This contributes to increased productivity and dispels

# Robust Communications Reduce Downtime and Contribute to Preventive Maintenance 

## More Detailed Information Through Communications

## Shorter Downtime!

The F3SX I/O monitor and error log can be used to determine the location and cause of a fault. All the I/O for the F3SX can be monitored. This enables the location of the fault to be determined. Also, the type of fault that has occurred can be found in the error $\log$, aiding in determining the cause of a failure.

## Preventive Maintenance Information

The log for synchronized monitoring time between systems enables prediction of switch installation errors. A $0.5-\mathrm{ms}$ cycle is used to measure the ON timing between systems. The past 16 operations are stored in the log, providing an idea of the problems occurring from the statistics of externally sent data. In the same way, a detailed log of stop times can be obtained from the feedback terminals.

## - I/O ON/OFF Monitor

Reads the ON/OFF status of connected I/O.

- Information on Cause of Trouble

Provides information on the location and type of error that occurred.

- Preventive Maintenance Information Reads the number of times the output has switched and the total ON time.

# F3SX-CD100-E Setup Support Software 

## Up to 600 Seconds! Delay Time Settings in 0.1-s Intervals

The delay time can be set to between 0.5 and 600 seconds ( 10 minutes) in intervals as small as 0.1 s . Set the optimum time for stop timing (see note) of devices such as Servomotors and Inverter Motors. This is ideal for applications in large-scale rollers and other devices that are difficult to stop due to high inertia.
Note: For stop category 1.

## Set the Selected Auxiliary Output

Outputs for the internal status of the Controller, such as the lockout output for error status and the output switching operations overflow alarm when the number of safety output operations has exceeded the set value, can be output to the three auxiliary output terminals, AS1 to AS3.

Intersystem synchronous monitoring timing and feedback monitoring timing can be used to set the optimal timing for the system configuration.

## Indicator Output Lighting Patterns

 for Various ApplicationsWhen the interlock (electromagnetic lock) is put into application at the worker side, the flashing pattern can be used as a work permission indicator to notify the operator when the lock will be released.

- Safety Input Status Lighting Pattern

| Any of the safety inputs is OFF | All safety inputs ON | Equipment starts at reset |
| :---: | :---: | :---: |
| Indicator flashing | Indicator lit |  |
| Flashing | Lit |  |
| Is a door is still open? |  |  |
| Is a worker close to the machine? |  |  |

■ Work Permitted Indicator Pattern

| Operating | Delay ON | Stopped |
| :--- | :--- | :--- |
| Indicator OFF | Flashing | Indicator flashing |

## Selection Method

## Model Number Structure and Product Configuration

Model Number Legend
F3SX- $\frac{\square \square \square}{1}\left(-T-\frac{\square}{2} \frac{\square}{3}\right)$

| No. | Code | Meaning |
| :---: | :---: | :---: |
| 1 | E | Emergency-stop Controller with DC solid-state safety outputs |
|  | NR | Emergency-stop Controller with safety relay output and external indicator output |
|  | ER | Emergency-stop Controller with safety relay output and DC solid-state safety output |
|  | EL1 | Emergency Stop/Safety Light Curtain/Two-hand Control Switch Input Controller with DC solid-state safety outputs |
|  | EL2 | Emergency Stop/Safety Light Curtain Controller with DC solid-state safety outputs |
|  | ED1 | Emergency Stop/Door Switch Input Controller with DC solid-state safety outputs |
| 2 | H | Delay time: $0.5 \mathrm{~s} \times$ value indicated at 3 . (odd numbers from TH01 to TH59) |
|  | N | Delay time: $1.0 \mathrm{~s} \times$ value indicated at 3 . (integers from TN01 to TN60) |
|  | W | Delay time: $10 \mathrm{~s} \times$ value indicated at 3 . (integers from TW07 to TW60) |

Note: "-T $\square \square \square$ " is specified only in model numbers for Controllers with fixed delay times.

| No. | Code | Meaning |
| :---: | :---: | :---: |
| 1 | N | Main Module with external indicator output |
|  | E | Main Module with DC solid-state safety outputs |
| 2 | L1 | Safety Light Curtain/Two-hand Control Switch Input Module |
|  | L2 | Safety Light Curtain Input Module |
|  | D1 | Door Switch Input Module |
|  | R | Relay Output Module (DPST-NO, SPST-NC): Non-delay (instant breaking) outputs (delay time cannot be set) |
|  | R1 | Relay Output Module (DPST-NO, SPST-NC): ON-delay outputs |
|  | R2 | Relay Output Module (DPST-NO, SPST-NC): OFF-delay outputs |
| 3 | H | Delay time: $0.5 \mathrm{~s} \times$ value indicated at 4 . (odd numbers from TH01 to TH59) |
|  | N | Delay time: $1.0 \mathrm{~s} \times$ value indicated at 4. (integers from TN01 to TN60) |
|  | W | Delay time: $10 \mathrm{~s} \times$ value indicated at 4 . (integers from TW07 to TW60) |

Note: 1. "T $\square \square \square$ " is specified only in model numbers for Controllers with fixed delay times. 2. In -T $\square \square \square$ models, all parameters, such as delay time and auxiliary solid-state outputs, are set at the factory. Therefore, these parameters cannot be changed using the Function Setup Software (F3SX-CD $\square \square \square$ ) for the F3SX.

## Product Configuration

The Controller has a modular configuration comprised of a combination of Main Modules, Input Modules, and Output Modules, as shown in the diagram above.
For information on non-standard I/O combinations, contact your OMRON sales representative.

## List of Models

## Main Modules

Non-delay (Instant Breaking) Models

| Output type | Non-delay (instant breaking) outputs |  | Model |
| :--- | :--- | :--- | :--- |
|  | Solid-state outputs | Contact outputs |  |
| Indicator output + contact output | None | Main contact (DPST-NO) <br> Auxiliary contact (SPST-NC) | F3SX-NR |
|  | F safety outputs <br> 1 auxiliary output | None $\square R$ |  |

Note: Models with multiple contact outputs are also available (RR/RRR).
OFF-delay Time Setting Models

| Output type | Non-delay (instant breaking) outputs |  | OFF-delay outputs | Model |
| :--- | :--- | :--- | :--- | :--- |
|  | Solid-state outputs | Contact outputs | Contact outputs |  |
| Indicator output + contact <br> output | None | Main contact (DPST-NO) <br> Auxiliary contact (SPST-NC) | Main contact (DPST-NO) <br> Auxiliary contact (SPST-NC) | F3SX-N- $\square$ RR2 |
| Solid-state output + contact <br> output | 2 safety outputs <br> 1 auxiliary output | None | Main contact (DPST-NO) <br> Auxiliary contact (SPST-NC) | F3SX-ER2 |

Note: The OFF-delay time for R2 models is factory-set to 0.0 s (non-delay (instant breaking)).
OFF-delay Time Fixed Models

| Output type | Non-delay (instant breaking) outputs | OFF-delay outputs | OFF-delay time | Model |
| :---: | :---: | :---: | :---: | :---: |
|  | Solid-state outputs | Contact outputs |  |  |
| Solid-state output + contact output | 2 safety outputs 1 auxiliary output | Main contact (DPST-NO) <br> Auxiliary contact (SPST-NC) | 0.5 s to 29.5 s (0.5-s intervals) | F3SX-ER2-TH $\square \square$ |
|  |  |  | 1 s to 60 s (1-s intervals) | F3SX-ER2-TN $\square \square$ |
|  |  |  | 70 s to 600 s (10-s intervals) | F3SX-ER2-TW $\square \square$ |

Note: The Function Setup Software for the F3SX cannot be used to change the settings for the above OFF-delay time fixed models.

## ON-delay Time Fixed Models

| Output type | Non-delay <br> (instant breaking) <br> outputs | ON-delay outputs | ON-delay time |
| :--- | :--- | :---: | :---: | :---: |

Note: The Function Setup Software for the F3SX cannot be used to change the settings for the above ON-delay time fixed models.
All models:
Note: For details on models with $\square \square$ shown in the model numbers, refer to List of Models on page 11.

## - List of Models

Non-delay (Instant Breaking) Models
F3SX-NR, F3SX-N- $\square \square \square$ (with External Indicator Output)

| Input type |  |  |  |  | Model | Width * | Weight (Main Module only) |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

| -TH15 | 7.5 s | -TN08 | 8 s | --- | --- | -TW50 | 500 s |
| -TH17 | 8.5 s | -TN09 | 9 s | --- | --- | -TW60 | 600 s |

*1. It is not possible to change the factory settings for delay time or any other parameters.
*2. The set time can be customized at the factory to a user-preferred time, provided that it is within the model standards. Contact your OMRON representative for details.

ON-delay Time Fixed Models

## F3SX-ER1-T $\square \square$

| $\mathbf{1}$ to 5 s |  |
| :---: | :---: |
|  | (1.0-second units) |
| Model suffix -T $\square \square \square$ | Set time |
| - TN01 | 1 s |
| - TN02 | 2 s |
| - TN03 | 3 s |
| - TN04 | 4 s |
| - TN05 | 5 s |

* In addition to the models listed in this table, ON-delay Time Fixed models of up to 60 s max (1.0-second units) are also available.
It is not possible to change the factory settings for delay time or any other parameters.

Function Setup Software for the F3SX (English Version)

| Appearance | Supported OS | Model |
| :---: | :---: | :---: |
|  | Windows 98SE or higher *, <br> Windows 2000 SP4 or higher, or Windows XP SP1 or higher | F3SX-CD100-E |

* IE4.0 or higher must be installed.

The F3SX-CD100-E Function Setup Software (SCHG-705B) is not included and must be purchased separately. Contact your OMRON representative for details.

Note: ON-delay Time Fixed models with a maximum set time of 60 s (in 1.0-second units) are also available.

## Setting Functions

- Delay time settings (ON-delay/OFF-delay)
- Monitoring time settings
- Indicator lighting pattern settings (F3SX-N only)
- Auxiliary outputs (AS1/AS2/AS3)
- Log read (feedback time for past 16 operations)

Intersystem monitoring time (for past 16 operations), error log

- I/O monitor
- An RS-232C cable (F39-JC2X1, sold separately) is required to use the Function Setup Software for the F3SX.

## Accessories (Sold Separately)

Junction Box for Safety Light Curtain

| Appearance | Connecting devices | Model |
| :---: | :---: | :---: |
|  | F3SN-A/-B, F3SJ |  |
|  | F3SX Series | F39-TB01 |

Junction Connector for F3SX

|  | RS-232C cable for <br> connecting F3SX to <br> personal computer | F39-JC2X1 | 2 m |
|  | RS-232C cable for <br> connecting F3SX to <br> OMRON PLC | F39-JC2X2 | 2 m |

## F3SX

## Ratings and Specifications

## General Specifications

Common Specifications

| Item | Ratings and Specifications |
| :--- | :--- |
| Safety category (EN 954-1) | Category 4 |
| Safety standards (IEC 61508) | SIL3 |
| Rated supply voltage | 24 VDC $\pm 10 \%$ (ripple p-p 10\% max.) |
| Startup time | 5 s max. |
| Control circuit protection | Output short-circuit protection, power supply reverse polarity protection * |
| Overvoltage category (IEC60664-1) | II |
| Insulation resistance | $100 \mathrm{M} \Omega$ (500 VDC) between all lead wires and outer case |
| Dielectric strength | $2,200 \mathrm{VAC}, 50 / 60 \mathrm{~Hz}$ for 1 min between all lead wires and outer case |
| Ambient temperature | Operating: -10 to $50^{\circ} \mathrm{C}$ (with no icing or condensation) <br> Storage: -30 to $70^{\circ} \mathrm{C}$ (with no icing or condensation) |
| Ambient humidity | Operating and storage: $35 \%$ to $85 \%$ (with no icing or condensation) |
| Vibration resistance | 10 to 55 Hz , double amplitude: $0.7 \mathrm{~mm}, \mathrm{X}, \mathrm{Y}$ and Z directions, 20 sweeps (power ON) |
| Shock resistance | $100 \mathrm{~m} / \mathrm{s}^{2}, \mathrm{X}, \mathrm{Y}$ and Z directions, 1,000 times (power ON) |
| Case material | Glass fiber-reinforced polyamide 66 (PA-66-FR) |
| Degree of protection | Terminal block: IP20 <br> Main body: $\quad$ IP40 (IEC 60529$)$ |

* If the protective function operates, turn ON the power again to recover.

Main Modules with External Indicator Output (N Modules)

| I/O |  |  |
| :--- | :--- | :--- |
| Input | Emergency stop input | Ratings and Specifications |
|  | Reset input 15 to $24 \mathrm{VDC} \pm 10 \%$ |  |
|  | OFF: Open or 0 to 5 VDC max. |  |
| Internal impedance: Approx. $5 \mathrm{k} \Omega$ |  |  |$]$

*1. When external indicators are not connected, connect resistance ( $1 / 4 \mathrm{~W}, 4.7 \mathrm{k} \Omega$ ) between the EL1 terminal and EL2 terminal. The lead wire resistance (without polarity) shown in the following diagram is included with the product.

## - (1)

*2. LED indicators (ratings: $24 \mathrm{VDC}, 0.7$ to 7 W ) can also be connected. Diagnostic checks, however, cannot be performed if LED indicators are connected.
*3. OMRON recommends the following indicators (both have a power consumption of 5 W ).

- PS-24-Y B0568: Manufactured by PATLITE Corporation (Always use an incandescent lamp as a replacement indicator. The malfunction monitoring using current detection will not function if LED indicators are used.)
- ASSC-24: Manufactured by ARROW ELECTRONICS IND. CO., LTD

(by PATLITE Corporation)

ASSC-24
(by ARROW ELECTRONICS
IND. CO., LTD.)
*4. Except for voltage drop due to cable extension.

Main Modules with DC Solid-state Safety Output (E Modules)

| Item |  | Ratings and Specifications |
| :---: | :---: | :---: |
| Input | Emergency stop input | ON: 15 to $24 \mathrm{VDC} \pm 10 \%$ OFF: Open or 0 to 5 VDC max. Internal impedance: Approx. $5 \mathrm{k} \Omega$ |
|  | Reset input |  |
|  | Feedback input |  |
|  | Auxiliary input |  |
| DC solid-state output | DC solid-state safety output | PNP transistor output <br> Load current: 300 mA max. (resistance load/inductive load) *1 <br> Residual voltage (when ON): 2 V max. *2 <br> Residual voltage (when OFF): 0.1 V max. <br> Leakage current (when OFF): 0.1 mA max. <br> Allowable capacitive load: $1 \mu \mathrm{~F}$ max. <br> Allowable wire resistance between output terminals and load: $4 \Omega$ max. |
|  | Auxiliary solid-state output | PNP transistor output <br> Load current: 25 mA max; Residual voltage: 2 V max. *2 |

*1. With an inductive load, connect a diode or other surge absorber parallel to the load.
*2. Except for voltage drop due to cable extension.
Relay Output Modules
R Modules: Delay time cannot be set.
R1 Modules: ON-delay can be set.
R2 Modules: OFF-delay can be set.

| Item |  |  |  | Ratings and Specifications |
| :---: | :---: | :---: | :---: | :---: |
| Relay contact outputs | Number of main contacts (safety outputs) |  |  | DPST-NO |
|  | Number of auxiliary contacts (auxiliary outputs) |  |  | SPST-NC |
|  | Rated load | Resistive load | Terminals 11/12 <br> (Auxiliary contact: Auxiliary output) | $250 \mathrm{VAC}, 50 / 60 \mathrm{~Hz}, 30 \mathrm{VDC}$ at 5A |
|  |  |  | Terminals 23/24 <br> Terminals 33/34 <br> (Main contacts: Safety outputs) | $250 \mathrm{VAC}, 50 / 60 \mathrm{~Hz}, 30 \mathrm{VDC}$ at 3.15 A (5 A) *1 |
|  |  | Inductive load |  | $\mathrm{AC} 15: 240 \mathrm{VAC}$ at $2 \mathrm{~A} \cos \phi=0.3$ DC13: 24 VDC at $1 \mathrm{AL} / \mathrm{R}=48 \mathrm{~ms}$ |
|  | Minimum permissible load *2 |  |  | 24 VDC at 5 mA (reference value) *3 |
|  | Electrical durability *2 |  |  | 100,000 operations min. (switching frequency: 1,800 times/hr) |
|  | Mechanical durability *2 |  |  | 10,000,000 operations min. (switching frequency: 36,000 times/hr) |

*1. An external fuse must be connected to the safety relay output. The safety category depends on the fuse rating:
(1) Safety Category 4 (EN954-1)

A fuse rated at 3.15 A max. must be connected externally to protect the safety relay output from contact welding. The current that can be applied to the relay contacts is limited by the fuse rating to 3.15 A max. (resistive load).
(2) Safety Category 3 (EN954-1) or lower

A fuse rated at 5 A max. must be connected externally to protect the safety relay output from contact welding. The current that can be applied to the relay contacts is limited by the fuse rating to 5 A max. (resistive load). For details, refer to section 10.4.3.4 of prEN50156-1.
*2. This rating is for Modules with built-in relays. The durability conditions are an ambient temperature of 15 to $35^{\circ} \mathrm{C}$ and an ambient humidity of $25 \%$ to $75 \%$.
*3. This value is a reference value. The Modules are not designed to be used below this value. If a large load is applied even once, switching may not be possible for microloads.

## Rated Current

The rated current depends on the type and number of Modules used, as shown below.

| Module type | Rated current |
| :--- | :---: |
| Main Module (E, N) | 150 mA |
| Input Module (L1, L2, B1, D1) | 150 mA |
| Relay Output Module (R, R1, R2) | 100 mA |

## Example:

F3SX-N-L2L2R: 150 (N Module $)+150($ L2 Module $)+150($ L2 Module $)+100($ R Module $)=550 \mathrm{~mA}$

## Response Time

Non-delay (Instant Breaking) Models

| Model (N Modules) | Relay outputs |  | Auxiliary output (AS1) |  |
| :--- | :---: | :---: | :---: | :---: |
|  | ON $\rightarrow$ OFF | OFF $\rightarrow \mathbf{\text { ON }}$ | ON $\rightarrow$ OFF | OFF $\rightarrow$ ON |
| F3SX-NR(-S) | 35 ms | 135 ms | 25 ms | 105 ms |
| F3SX-N- $\square R(-S)$ | 35 ms | 135 ms | 25 ms | 105 ms |
| F3SX-N- $\square \square R(-S)$ | 40 ms | 156 ms | 30 ms | 126 ms |
| F3SX-N- $\square \square R(-S)$ | 45 ms | 177 ms | 35 ms | 147 ms |

ON-delay/OFF-delay Time Setting Models

| Model ( N Modules) | Relay outputs |  | Auxiliary output (AS1) |  |
| :---: | :---: | :---: | :---: | :---: |
|  | ON $\rightarrow$ OFF *2 | OFF $\rightarrow$ ON *1 | ON $\rightarrow$ OFF | OFF $\rightarrow$ ON |
| $\begin{aligned} & \text { F3SX-N-RR1 *1 } \\ & \text { F3SX-N-RR2 *2 } \end{aligned}$ | 35 ms | 135 ms | 25 ms | 105 ms |
| $\begin{aligned} & \text { F3SX-N- } \square R R 1 \text { *1 } \\ & \text { F3SX-N- } \square R R 2 \text { *2 } \end{aligned}$ | 40 ms | 156 ms | 30 ms | 126 ms |
| $\begin{aligned} & \hline \text { F3SX-N- } \square \square R R 1{ }^{* 1} \\ & \text { F3SX-N- } \square R R 2 \text { *2 } \end{aligned}$ | 45 ms | 177 ms | 35 ms | 147 ms |

*1. R1 Modules (terminals 23/24, 33/34) support an ON-delay time setting using the Function Setup Software for the F3SX (F3SX-CD100-E) The ON-delay time is factory-set to 0 s (non-delay (instant breaking)),
*2. R2 Modules (terminals $23 / 24,33 / 34$ ) support an OFF-delay time setting using the Function Setup Software for the F3SX (F3SX-CD100-E) The OFF-delay time is factory-set to 0 s (non-delay (instant breaking)).
*3. The actual ON-delay time (time from interlock reset until output occurs) and OFF-delay time (time from when input turns OFF until output turns OFF) is calculated by adding the applicable times shown in the above table to the user-set time.
Example: If the OFF-delay for an F3SX-N-RR2 is set to $0.5 \mathrm{~s}(500 \mathrm{~ms})$, the actual OFF-delay is $500+35=535 \mathrm{~ms}$.

## Non-delay (Instant Breaking) Models

| Model (E Modules) | Relay outputs |  | DC solid-state safety output, auxiliary output |  |
| :--- | :---: | :---: | :---: | :---: |
|  | ON $\rightarrow$ OFF | OFF $\rightarrow$ ON | ON $\rightarrow$ OFF | OFF $\rightarrow$ ON |
| F3SX-E(-S) | --- | --- | 25 ms | 105 ms |
| F3SX-E $\square(-S)$ | 35 ms | 135 ms | 25 ms | 105 ms |
| F3SX-E- $\square(-S)$ | 35 ms | 135 ms | 25 ms | 105 ms |
| F3SX-E- $\square \square(-S)$ | 40 ms | 156 ms | 30 ms | 126 ms |
| F3SX-E- $\square \square \square(-S)$ | 45 ms | 177 ms | 35 ms | 147 ms |

ON-delay/OFF-delay Time Setting Models

| Model (E Modules) | Relay outputs |  | DC solid-state safety output, auxiliary output |  |
| :---: | :---: | :---: | :---: | :---: |
|  | ON $\rightarrow$ OFF *2 | OFF $\rightarrow$ ON *1 | ON $\rightarrow$ OFF | OFF $\rightarrow$ ON |
| $\begin{aligned} & \text { F3SX-ER1 *1 } \\ & \text { F3SX-ER2 *2 } \end{aligned}$ | 35 ms | 135 ms | 25 ms | 105 ms |
| $\begin{aligned} & \text { F3SX-E- } \square R 1 \text { *1 } \\ & \text { F3SX-E- } \square R 2 \text { *2 } \end{aligned}$ | 35 ms | 135 ms | 25 ms | 105 ms |
| F3SX-E- $\square \square R 1{ }^{* 1}$ F3SX-E- $\square$ R2 *2 | 40 ms | 156 ms | 30 ms | 126 ms |
| F3SX-E- $\square \square \square R 1$ *1 F3SX-E- $\square \square R 2$ *2 | 45 ms | 177 ms | 35 ms | 147 ms |

*1. R1 Modules (terminals 23/24, 33/34) support an ON-delay time setting using the Function Setup Software for the F3SX (F3SX-CD100-E) The ON-delay time is factory-set to 0 s (non-delay (instant breaking)).
*2. R2 Modules (terminals 23/24, 33/34) support an OFF-delay time setting using the Function Setup Software for the F3SX (F3SX-CD100-E).
The OFF-delay time is factory-set to 0 s (non-delay (instant breaking)).
*3. The actual ON-delay time (time from interlock reset until output occurs) and OFF-delay time (time from when input turns OFF until output turns OFF) is calculated by adding the applicable times shown in the above table to the user-set time.
Example: If the OFF-delay for an F3SX-E-D1D1D1R2 is set to $1 \mathrm{~s}(1,000 \mathrm{~ms})$, the actual OFF-delay is $1,000+45=1,045 \mathrm{~ms}$.

## Safety Output Monitor

## (AS1 Terminal: N/E Modules)

The safety output monitor outputs synchronously with the safety outputs (non-delay (instant breaking)).

## Timing Chart

## WARNING

AS1, AS2, and AS3 are not safety outputs and cannot be used to configure a safety system.
Doing so may result in serious injury if the F3SX or peripheral devices malfunction.

## Terminal Arrangement

## Main Modules

| Item | Terminal No. | Function |  |
| :---: | :---: | :---: | :---: |
|  |  | Model: F3SX-N | Model: F3SX-E |
| Power supply inputs | A1 | 24-VDC input |  |
|  | A2 | GND (0 V) input |  |
| Emergency stop inputs *1 | T11 | Emergency Stop Switch inputs |  |
|  | T12 |  |  |
|  | T21 |  |  |
|  | T22 |  |  |
| Reset inputs | Y1 | Reset inputs: Auto/manual reset selection, system reset |  |
|  | Y2 |  |  |
|  | Y3 |  |  |
| Feedback input | FB | Feedback time monitor (500 ms max.) |  |
| Auxiliary solid-state outputs *2 | AS1 | Safety output monitor (standard setting: Outputs synchronously with the safety output) |  |
|  | AS2 | Information trigger <br> (Standard setting: Outputs error information, information on excessive output switching, and information on excessive ON time) | Ready output (Standard setting: Outputs when safety inputs are all ON.) |
|  | AS3 | Standby output <br> (Standard setting: Outputs after power is turned ON, the F3SX has been initialization, and I/O can be normally controlled.) |  |
| Auxiliary input *3 | SSC | Start command input (soft-start circuit) |  |
| External indicator outputs *4 | EL1 | Indicator input with diagnostic functions (+: sourcing) | --- |
|  | EL2 | Indicator input with diagnostic functions (-: sinking) | --- |
| DC solid-state safety outputs | SS1 | --- | DC solid-state safety output 1 |
|  | SS2 | --- | DC solid-state safety output 2 |
| RS-232C port | COM | RS-232C port for connecting communications cable |  |

*1. If the emergency stop switch is not necessary, directly connect terminal T11 to T12, and terminal T21 to T22.
*2. The Function Setup Software for the F3SX (F3SX-CD $\square \square \square$, sold separately) can be used to change function settings for the auxiliary solid-state output terminals (AS1, AS2, and AS3), and the external indicator output. For details refer to the Help menu in the F3SX-CD $\square \square \square$.
*3. When the start command input (SSC) is not necessary, directly connect the SSC terminal to the 24 VDC input terminal (A1 terminal).
*4. When an external indicator is not necessary, connect resistance ( $1 / 4 \mathrm{~W}, 4.7 \mathrm{k} \Omega$ ) between the terminals EL1 and EL2.

## Indicator Display, Lighting Patterns, and Meanings

| ER indicator | Meaning | Cause | Remedy |
| :---: | :---: | :---: | :---: |
| Lit | Emergency stop switch input sync error | Emergency stop switch contact is faulty or emergency stop switch wiring is incorrect. | Check the wiring to the emergency stop switch. |
| 1-time flashing | Short-circuit/wiring error between emergency stop switch inputs | The wiring to the emergency stop switch has short-circuited. | Check the emergency stop switch and wiring. |
| 2-time flashing | Emergency stop switch input terminal circuit error | The emergency stop switch input terminal is faulty. | Replace the F3SX. |
|  |  | Excessive noise is affecting the F3SX. | Check the noise conditions around the F3SX. |
| 3-time flashing | Reset input terminal error | The wiring to the reset input terminal is incorrect. | Check the wiring to the reset input terminal. |
|  |  | The wiring to the reset input terminal is broken or short-circuited. | Check the wiring to the reset input terminal. |
|  |  | The reset input terminal circuit is faulty. | Replace the F3SX. |
| 4-time flashing | External indicator output terminal error (F3SX-N) | The external indicator output circuit is faulty. | Replace the external indicator. |
|  |  | The wiring to the external indicator output circuit is incorrect | Check the wiring to the external indicator. |
|  |  | An error has occurred in the external indicator output circuit. | Replace the F3SX. |
|  | DC solid-state safety output terminal error (F3SX-E) | The load (external device) is faulty. | Replace the load (external device). |
|  |  | The wiring to the load (external device) is incorrect. | Check the wiring to the load (external device). |
|  |  | An error has occurred in the DC solid-state safety output circuit. | Replace the F3SX. |
| 5-time flashing | Relay output terminal error * | The relay output is faulty. | Replace the F3SX. |
|  |  | Excessive noise is affecting the F3SX. | Check the noise conditions around the F3SX. |
| 6-time flashing | Feedback input terminal error | The wiring to the contactor or other external device is incorrect. | Check the wiring to the contactor or other external devices. |
|  |  | The contactor or other external device is faulty. | Replace the contactor or other external device. |
| Continuously flashing | Noise or F3SX malfunction | Excessive noise is affecting the F3SX. | Check the noise conditions around the F3SX. |
|  |  | The F3SX's internal circuits are faulty. | Replace the F3SX. |

* This error does not occur in F3SX Safety Controllers configured without a Relay Output Module.

## Indicator Display, Lighting Patterns, and Meaning for L1/L2/D1 Modules

The ER1 indicator display indicates errors in Modules in the first set, and the ER2 indicator display indicates errors in Modules in the second set.

| ER1/ER2 indicator | Meaning | Cause | Remedy |
| :---: | :---: | :---: | :---: |
| Lit | Input sync error in input device | The input device contacts are faulty or the input device wiring is incorrect. | Check the input device and wiring. |
| 1-time flashing | Short-circuit or wiring error between inputs of input device. | The input device wiring is short-circuited. | Check the wiring to the input device. |
| 2-time flashing | Error in input terminal circuit of input device. | Excessive noise is affecting the F3SX. | Check the noise environment around the F3SX. |
|  |  | The input device input circuits are faulty. | Replace the F3SX. |

Note: For details on the indicator lighting pattern for B1 Modules, refer to the F3SX User's Manual.

| Stop category | IEC60204-1 | 0 |
| :--- | :--- | :--- |
| Safety category | EN954-1 | 4 |

S1: S2,S3, S8:

Emergency stop switch with positive opening mechanism (A165E or A22E) $\Theta$
Reset switch
S4, S6, S9, S11: Limit switch
S5, S7, S10, S12: Safety limit switch with positive opening mechanism (D4D or D4B) $\Theta$
KM1 to KM6:
M1 to M3: Three-phase motor
Magnetic contactor
E1: $\quad 24-$ VDC power supply (S82K)
Note 1. The above circuit diagram example conforms to Category 4.
2. In the above circuit diagram example, the stop category (EN60204-1) is 0 .

## Safety Precautions

## The following information is intended as a guide for selecting the F3SX Safety Controller.

Be sure to read the User's Manual for the product (SCHG-705) before use.

## Overview

- The F3SX is designed for use by authorized personnel who thoroughly understand the installed machinery.
- The use of "authorized personnel" in the User's Manual (SCHG705) refers to personnel qualified and authorized to secure safety across all phases of the safety life cycle from machinery design through, installation, operation, maintenance, and disposal
- The specified installation environment and machinery performance characteristics of the F3SX are applicable under correct usage conditions. Have a related organization perform risk assessment before selecting, installing, or setting the F3SX.
- Be sure to thoroughly read and understand the User's Manual for the product (SCHG-705) before use and always use the product correctly according to the manual.

## Regulations and Standards

- "Type Approval" specified in Chapter 44.2 of the Industrial Safety and Health Law in Japan does not apply to independent Controllers. This law applies to systems incorporated with the F3SX Controllers. Therefore, when using the F3SX Controllers in Japan as "safety devices for presses or shearing machines" as specified in Chapter 42 of the same law, apply for approval as a system.
- The F3SX is electro-sensitive protective equipment (ESPE) in accordance with European Union (EU) Machinery Directive Annex IV, B, Safety Components, Item 1, Item 2.
- The F3SX received the following approvals from TÜV-PS.
(1) EU Regulations
- Machinery Directive: Directive 98/37/EC
- Low Voltage Directive: Directive 73/23/EEC
- EMC Directive: Directive 89/336/EEC
(2) European Standards
- EN61508 (SIL 1-3), EN954-1 (Category 4, 3, 2, 1, B), EN61496-1 (TYPE 4 ESPE), EN50178, EN55011, EN60204-1, EN61000-6-2, EN61000-6-4, EN1760, EN574 (Type III C), EN1088
(3) International Standards
- IEC61508 (SIL 1-3), IEC61496-1 (Type 4 ESPE), IEC60204-1
- The F3SX received the following approvals from the Third Party Assessment Body UL:
- Certificate of UL listing for US and Canadian safety standards: UL508, UL1998, UL61496-1 (Type 4 ESPE), CSA C22.2 No. 14, CSA C22.2 No.0.8
- Install the reset switch in a location from which the entire hazardous area is visible and where the switch cannot be operated from within the hazardous area.
- Connect control devices that are suitable for the required safety functions. Using unsuitable external devices may result in the F3SX not being capable of performing safety functions fully.
- The DC Power Supply Unit must satisfy all of the following conditions for the F3SX to meet EN60204-1, IEC61496-1, and UL508 standards.
- The power supply voltage is within the rating ( $24 \mathrm{VDC} \pm 10 \%$ ).
- The power supply is used to supply the F3SX and its connected Sensors only, and is not connected to any other devices or equipment. When connecting multiple devices, make sure the total rated current is not exceeded.
- The power supply conforms to the EMC Directive (industrial environment).
- The power supply uses double or reinforced insulation between the primary and secondary circuits.
- The power supply automatically resets overcurrent protection characteristics (voltage drop).
- The power supply maintains an output holding time of at least 20 ms.
- The power supply must have output characteristics of Class 2 Circuit or Limited Voltage-Current Circuit as defined in UL508.
- The power supply must conform to regulatory requirements and standards regarding EMC and electrical equipment safety of the country where the F3SX is installed.
Example: The EMC Directive (industrial environment) and the Low Voltage Directive in EU.
- When using a commercially available switching regulator, make sure FG (frame ground terminal) is connected. Faulty operation caused by switching noise may result if the terminal is not connected.
- Do not connect a DC or AC power supply output that exceeds the rated value to the power supply input of the F3SX.
- Connect a fuse serially to the output contact of the relay output.
- Do not use a load that exceeds the switching capacity. Doing so may result in damage to the output circuits and the F3SX may not be capable of turning OFF.
- Take measures to prevent common malfunctions that would disable all redundant safety circuits at the same time.
- Do not use the F3SX's PLC communications functions to configure a safety system. Doing so may result in serious injury due to faulty wiring or PLC malfunction.
- Do not attempt to disassemble, repair, or modify the F3SX. Otherwise, the F3SX may not be capable of performing its safety functions.
- Wire the I/O terminals correctly. Incorrect wiring may result in electric shock or the safety functions may be damaged.
- Do not use the auxiliary outputs to configure a safety system. Using the auxiliary outputs as safety outputs may result in serious injury if the F3SX or peripheral devices malfunction.
- Do not connect input devices to the auxiliary input terminal (start command input) to configure a safety system. Doing so may result in serious injury if the F3SX or peripheral devices malfunction.

## $\triangle$ CAUTION

- The applicable safety category is determined from the whole safety control system. Consultation with a third party assessment body is recommended to make sure that the whole safety control system meets requirements.
- The service life greatly depends on factors such as the switching conditions and load. Be sure to test the F3SX under actual application conditions, and make sure that the number of switching operations is within the permissible range.
- Use the F3SX within a protective structure that complies with IP54 or higher.
- Secure the F3SX to the DIN track using Mounting Brackets if the DIN track is short or if securing is otherwise required. Not doing so may result in the F3SX falling off the DIN track due to vibration.
- Provide a space of at least 5 mm beside and at least 50 mm above and below the F3SX for ventilation.

## - Terminology

IEC61508: 1998 (EN61508: 2001)
This standard specifies detailed provisions for the procedures to be followed (including design and evaluation methods) covering all phases of the safety life cycle from design through installation, maintenance, and disposal when a product has safety functions that use electrical, electronic, or programmable systems.

## DC Solid-state Safety Output Waveform

In the F3SX, the output periodically turns OFF for a short time to check that the function for turning OFF output is operating normally. If the output signal turns OFF during this time the output circuit is determined to be operating normally. Conversely, if the output does not turn OFF, an output circuit or wiring error is detected, and the Controller is put in lockout status. Set the input response time of connected devices such that the devices connected to terminals SS1 and SS2 do not malfunction due to the OFF pulse signal.

## SIL (Safety Integrity Level)

SIL refers to a numeric value that indicates the safety integrity requirements of the safety system in the same way as they were previously indicated by EN954-1 Safety Categories B, and 1 through 4. The level is obtained by calculating the ratio of dangerous malfunctions that can occur and assigning a level that corresponds to the frequency of use. This Controller is SIL3, which indicates a safety level equivalent to EN954-1 Safety Category 4.

## - Diagnostic Functions

Intersystem Synchronous Monitoring
The time difference in the rise time of inputs between systems (between channels 1 and 2 ) is monitored. This prevents safety equipment from being disabled.

## Intersystem Short-circuit Monitoring

Short-circuits of inputs between systems (between channels 1 and 2) are monitored. This allows detection of damage to safety equipment. If a short-circuit occurs, the Controller is locked out, and the OFF status is maintained. (Fuse replacement is not required.)

## - Control Functions

## Monitoring Feedback Timing (FB)

The N.C. contact of the external relay that controls the source of danger in the machine is input to the F3SX as a feedback signal, thereby detecting welding contacts and other operating faults, and can also monitor whether the feedback signal is returned within a fixed time (factory setting: 500 ms ). When this function is not used, perform function settings using the F3SX-CD100-E Function Setup Software for the F3SX.

## Standby Output (AS3 Terminal)

The standby output is output after the F3SX CPU Unit is initialized and I/O control can be performed normally. Use this output as part of the operation standby signals for the entire system.

The standby output is not a safety output. Do not use the standby output to configure safety systems. Doing so may result in serious injury if a malfunction
 occurs.

## Ready Output (AS2 Terminal: E Modules)

The ready output is output when the F3SX is in a standby state and all the safety inputs are ON.

## Information Trigger (AS2 Terminal: N Modules)

The information trigger is output when damage or a timeout occurs during Controller diagnosis or monitoring. The trigger signal can be used as a command request signal to a host (e.g., Programmable Controller or personal computer).

The information trigger output is not a safety output. Do not use the information trigger to configure safety systems. Doing so may result in serious injury if a
 malfunction occurs.

## Start Command Input (SSC Terminal)

The start command input is used to operate a safety relay when it receives a start command from the machine in addition to an input condition from the safety device. (If the SSC terminal is not required, connect it to the 24-VDC terminal.)

Do not connect the start command input to an input device, or otherwise use it to configure safety systems. Doing so may result in serious injury if a
 malfunction occurs.

## Precautions for Correct Use

Do not use the F3SX in atmospheres or environments that exceed product ratings.

## Dimensions

## F39-TB01

* Use F39-JC $\square$ B or F39-JC $\square$ T Cable with Connectors on Both Ends to connect the Junction Box.
For details on F39-JC $\square \mathrm{B}$, refer to the catalog and other reference materials for the Safety Light Curtain.

Mounting hole dimensions

Cable with Connectors on Both Ends
F39-JC $\square \square$

Vinyl-insulated round cable, black, $6.6-\mathrm{mm}$ dia., 8 -core ( 4 sets) (Conductor cross-section: $0.3 \mathrm{~mm}^{2}$; Insulator diameter: 1.15 mm ) Standard length: L (*)
as shown below.

| Model | $\mathbf{L ( m m )}$ |
| :---: | :---: |
| F39-JC1T | $1,000^{+150} 0$ |
| F39-JC3T | $3,000^{+150}$ |
| F39-JC5T | $5,000^{+300}$ |
| F39-JC10T | $10,000_{0}^{+300}$ |

| Wire color | Signal name | F3SX terminal No. |
| :---: | :---: | :---: |
| Brown | +24 V | 1 or 16 |
| Blue/shield | 0 V | 2 or 15 |
| Gray | RS-485 (A) | 3 or 14 |
| Pink | RS-485 (B) | 4 or 13 |
| Green | Control output 1 | 5 or 12 |
| Yellow | Reset output | 6 or 11 |
| White | Control output 2 | 7 or 10 |
| Red | Test input | 8 or 9 |

In the interest of product improvement, specifications are subject to change without notice.
